Uses only the power the application requires  
*Replacing constant speed with variable speed will significantly reduce energy cost.*

#### Economical to Use

*No need to derate drive for high starting torque applications.*

#### Combines Soft Start with Variable Speed

*Adjustable Soft Start.*

#### Customization for OEM's

When an off the shelf drive does not meet your needs, we will work with you to provide a custom drive solution, Ready to Use, "Out-of-the-Box."

*Customization includes: Pre-calibrating or programming of a stock control, adding a custom label or branding, custom software, PLC functions or designing a new control.*

**GFCI Software** allows the equipment to operate with Ground Fault  
Circuit Interruption circuit breakers or outlets.

\*CSP™ = Common Sense Programming. Parameters are organized into easy-to-understand intuitive groups.

## Additional Features

### Sensorless Flux Vector Control

Flux Vector Compensation with Static Auto-Tune provides excellent speed regulation with high torque loads throughout the entire speed range. Auto energy saving at light loads. Smooth motor torque.

### Local/Remote Operation

When used with process control, the Local/Remote key can be used to switch from process control to manual control if a process fault occurs.

### Electronic Inrush Current Limit (EICL™) Protection

Eliminates harmful inrush AC line current during power up.

### Inputs/Outputs

Seven isolated multi-function inputs with sink or source mode control logic, two analog inputs, two multi-function output relays and one analog output.

### Built-in Potentiometer

Quickest way to change motor speed.

### Ride-Through

Provides smooth recovery to the previous set speed during a momentary power loss.

### Holding Torque at Zero Speed

Resists motor shaft rotation when the drive is in "Stop" mode.

### Regeneration Protection

Eliminates tripping due to high bus voltage caused by rapid deceleration of high inertial loads.

### Undervoltage and Overvoltage Protection

Shuts down the drive if the AC line input voltage goes above or below the operating range.

### Short Circuit Protection

Shuts down the drive if a short circuit occurs at the motor (phase-to-phase).

## Drive Options

### Memory Module

The Memory Module can store up to four programs for cloning and archiving. The drive can also store up to four programs.

### IODF Input/Output Multi-Function Expansion Module

Adds up to 5 points of additional I/O.

### Drive-Link™ Programming Kit

Allows PC programming.

### Modbus Serial Communication Module

See instruction manual for complete description.

# General Connection Diagram

**Notes:** 1. Multi-Function Input Terminals (MFIT 1 – 5 on TB1 of the drive) are factory set for N.O. Contacts or NPN Transistors (J1 set to the “N.O. / NPN” position), which use the internal power supply. For NPN Transistors, which use an external power supply (5 – 24 Volts DC), set Jumper J1 to the “EXT” position. For PNP Transistor circuits, which use the internal power supply or an external power supply (5 – 24 Volts DC), set Jumper J1 to the “PNP” position. 2. Multi-Function Output Relay Contact Ratings: 1 Amp at 30 Volts DC, 0.5 Amp at 125 Volts AC, and 0.25 Amp at 250 Volts AC. 3. Multi-Function Input Terminals (MFIT 6 – 7 on TB4 of the IODF) only accept N.O. Contacts or NPN Transistors (which use the internal power supply).
