EPNA Motors (1 HP+)

Enhanced Performance (EP.NA) integral motors represent exceptional value to customers. To maximize the performance of the motors, a host of advanced features has been developed providing tangible benefits to the users.

All in one

To simplify transactions throughout the continent, North American version (.NA) features standard multiple listings including DOE, UL and CSA, along with CE marking. Other versions are available for premium performance with European 50 Hz voltages.

Exceptionally long life

Our Premium Efficient Motors feature lower temperature rise and robust class “F” insulation. The combination of those attributes yield reduced motor operating temperatures that exponentially increase the thermal life of the insulation.

Eco friendly

Premium efficiency, mandated by the DOE, shrinks the carbon footprint by delivering more torque at the same level of energy consumption. Higher starting torques may allow smaller motors to be selected for some applications.

Get CAD models for Sumitomo Drive Technologies products today at www.sumitomodrive.com/Configurator

Cost-effective

The premium efficiency design is cost-effective in reducing energy consumption throughout the full speed range, resulting in a lower total lifecycle cost.

The assumptions for the study are as follows:
9.8 cents of a dollar per kWh • 8600 operating hours annually • A 7.5 kilowatt motor (10 HP) • IE3 motor costing 25% more than the IE1 motor • IE3 premium efficiency motor being 2.8% more efficient than the IE1 standard efficiency motor

Inverter duty

All of the motors feature corona resistant magnet wire that resists the voltage spikes that are inherent to the widely applied IGBT inverters and extends insulation life. Inverter duty brake motors are also available. The non-brake motors are suitable for a 10:1 turndown. The advanced fan design helps to keep the motor running cool at lower input speeds.

Optimized Geometry

Increasing motor size is one of several techniques to reduce losses and achieve premium efficiency. Sumitomo optimized its existing external envelope while still accommodating a large motor core. The result is a compact premium efficient motor.

Patented, High-Performance Gearmotors and Reducers Featuring All-Steel Hypoid Gearing

Outstanding Efficiency Saves Money

Efficiencies far higher than worm gearing. Highly efficient across all ratios. No cooling fans required.

Hyponic® hypoid gearing demonstrates efficiencies of 93% within the range of 30 to 1440:1.

- ▶ Grease lubricated design is maintenance free, requires no oil changes and is up to 93% gear efficiency across all ratios

Quiet, Compact and Maintenance-Free

- ▶ All-steel hypoid gear design transmits torque more efficiently for more torque density in a compact unit

Product Description

The Sumitomo Hyponic® Gearmotor represents 60 years of excellence in the design and manufacture of premium gearing solutions. With millions of Hyponics currently in service, the product features a compact, modular housing, **maintenance-free grease lubrication and high efficiency operation**. Options include C-face quill design; unique FKM antimicrobial, multi-lipped rotary output seal; corrosion resistant, stainless output shaft and hardware; and synthetic NSF H-1, food-grade lubricant. NSF51 antimicrobial powder coating makes Hyponic® the ideal choice for food, beverage, and pharmaceutical industries. Sumitomo's patented, all-steel hypoid gear technology leads the industry in quiet operation and high efficiency. The Hyponic® significantly outperforms worm gearing for all ratios.

Features & Benefits

- Patented Hyponic gear technology is **up to 93% gear efficiency** across all ratios and requires no cooling fan
- **NSF 51 approved antimicrobial powder coating** protects against the growth of bacteria, mold, and fungus.
- **All-steel hypoid gear design** transmits torque more efficiently for more torque density in a compact unit
- **Maintenance-free grease lubrication** eliminates oil changes
- **Compact, lightweight** design in an aluminum, corrosion resistant housing with optional washdown protection
- Hollow bore makes **installation and retrofit quick and easy**
- **Extremely quiet**, smooth operation is ideal for commercial use
- **Two-Year warranty**
- Optional, popular keyed-hollow bore sizes available from stock: refer to page 4.9.

General Specifications Summary

Ratios:	3.5:1 up to 1440:1
HP:	1/8 to 15 HP
Maximum Torque:	13,100 in.-lbs.
Electrical:	230/460 VAC (3-Phase)
Housing:	Lightweight, corrosion-resistant aluminum
Mounting:	Flange, Bolt-On Feet
Shafts:	Hollow, Solid
Input:	Quill, C-Face Adapter or Integral Motor

► Optional plug-in shaft and bolt-on feet enhance Hyponic® mounting flexibility

Modular Housing

C-Face Quill Adapter, Plug-in Shaft, Foot Mount

For additional Hyponic information, please visit www.sumitomodrive.com

Applications

- Bottling & Food Processing
- Commercial Bakery Lines
- Pharmaceutical Machinery
- Automotive Assembly Plants
- Conveyor Lines & Material Handling
- Residential Elevators & Lifts
- Automated Bay & Dock Door Drives
- Dehydrators
- Packaging

Note: [1] This frame size is torque limited. Overload may occur if the motor is loaded to its full capacity. Sumitomo recommends the use of a torque limiting device to protect the unit and/or the driven machine.

FAQs

How do I select a Hyponic® speed reducer or gearmotor?

Selection is based on the actual horsepower and/or torque requirements at the output shaft. The Hyponic® speed reducer has particularly high efficiencies over a wide range of reduction ratios, which frequently permits the use of reduced input power requirements (smaller HP or kW motor) without sacrificing output shaft torque. The selection procedures in this catalog will guide you in choosing the most efficient reducer for your application.

What information do I need to get started in the selection process?

To select the proper reducer for your application, you will need to know:

- Application: type of driven machine
- Hours of operation per day
- Motor power (HP or kW) and speed (RPM)
- Mounting position
- Environmental conditions
- Ambient temperature range

If there are any special environmental factors or operation requirements, then they must also be noted. This information will be important in determining the Service Factor of your application.

What are Service Factors and how are they used?

In general, reducers are rated for the specific conditions and operating requirements of the application by the use of AGMA-defined Service Factors. The AGMA Load Classifications table on page 2.6 classifies applications by the type of load to help users to apply the correct service factors shown on page 2.3. The Service Factors are used in the product selection process to adjust for the specific conditions and operating requirements of your application.

What do I do if my application has particularly severe operating conditions?

The standard ratings for Hyponic® are based on 10-hour daily service under conditions of uniform loads (equivalent to AGMA service factor 1.0). By following the product selection process, you will determine and apply the Service Factors to compensate for the severe operating conditions.

What are the advantages of a shrink disc?

The shrink disc provides for easy mounting and removal to and from the shaft of the driven machine. Because it requires no keyway, the shaft isn't weakened and maximum torque is transmitted.

What kind of torque arm do I specify?

The standard torque arm is shown on page 4.8. The Hyponic® gearbox does not ship with a torque arm unless customer specifies.

Can the Hyponic be mounted in any position?

All frame sizes come standard grease lubricated and can be mounted in any position. Food-grade grease and oil lubrication is available upon customer request.

Enhanced Performance (EP) Motors FAQs (1HP+)

What efficiency level are these Enhanced Performance (EP) motors?

The EP motor (applies to 1HP and above) is a Premium efficiency class, or International Efficiency 3 (IE3) design. Our integral fractional (less than 1HP) motors are not EP and are classified as standard efficiency IE1 motors.

What standards do these motors meet?

All Sumitomo motors are compliant with the Energy Policy and Conservation Act (EPAAct), as recently amended by the Department of Energy with a new ruling.

EP Sumitomo motors meet the efficiency levels promoted by the Consortium for Energy Efficiency (CEE) and meet the Canadian efficiency levels specified by NRCan.

The IE3 efficiency ratings conform to both the IEC Standard 60034-30:2009 and eco-design directive 2005/32/EC.

Will Sumitomo motors work with inverters?

All current EP motors feature corona resistant magnet wire that extends the life of the insulation and enables the motors to resist the voltage spikes common with IGBT variable frequency drives.

What agency listings apply?

All EP motors in this product line are UL recognized, CSA certified and CE marked.

Can the motor be nameplated to operate at 50 hertz?

The motor can be nameplated and will operate at 50 hertz, but depending on the export destination, it may not meet that country's energy efficiency requirements. For areas requiring IE3 performance at 50 hertz, like Asia and Europe, other 50 hertz specific versions can be provided. Conformance with energy efficiency requirements in destination country is the responsibility of the customer.

Is the selection procedure the same as previous gearmotors?

Similar, the difference is restricted to applications with a large number of across the line starts and stops. Because the EP motors have more inertia and higher inrush current than previous integral motors, a supplemental service factor is applied to these applications using EP motors. The selection procedure for fractional HP units is unchanged.

Are the brakes the same?

The brakes are the same direct acting, fast response types used previously. For motors 1 HP and above they are a new larger model that has been redesigned to match the new motor profiles. Because the EP motor inertia is significantly higher, it may be necessary to adjust external trigger points or limit switches. Since the brake assembly shapes are different, old and new kits are not interchangeable.

What is the standard insulation system?

The motors continue with the Class F system, which limits the temperature rise to a Class B rise, where it bounds the allowable temperature rise to 80°C. It utilizes an insulation system capable of handling a 105°C rise to significantly extend insulation life.

Are EP motors interchangeable with old AF-motors?

The new EP motors without brake have the same 10:1 constant torque speed range as the AF-motor. Motors are dimensionally and performance-wise different so VFD re-programming may be required. For EP brakemotor with use on VFDs, the applicable speed range may be limited. Please consult the factory for options for EP brakemotors.

Will non-HP motors continue to be available?

For motor powers 1 HP and above, EP motors have replaced the standard efficiency motors. (does not apply to fractional HP). 1HP+ Older motors do not meet the federally mandated efficiency requirements that went into effect on June 1, 2016. Non-compliant motors cannot be manufactured or imported into the United States.

Should I be concerned if I am replacing a non-EP motor with the new EP motor?

For most applications, the use of the new EP motor will result in a more efficient, cooler-running and energy-saving motor. However, for applications with certain performance constraints, you may need to review the impact of the following:

- larger dimension and weight
- larger moment of inertia
- higher starting current and torque.

If taking a standard efficiency motor off a gearmotor and replacing it with the same HP new EP motor, the EP motor will bolt to the non-EP gearmotor. The motor flange diameters, pilot diameters, bolt patterns and shaft diameters all match. Motor body dimensions and weight will change.

Standard Specifications

3 Phase Integral Motor Fractional HP Motor	Standard Specifications		Standard Specifications with Built-In Brake	
	Capacity Range	1/8 through 3/4 HP (4 pole)	1/8 through 3/4 HP (4 pole)	
	Power Supply	Motor Power: 230 / 460V, 60 Hz, 3 Phase 575V, 60 Hz, 3 Phase	Motor Power: 230 / 460V, 60 Hz, 3 Phase 575V, 60 Hz, 3 Phase Brake Power: 230 / 460V, 60 Hz, 1 Phase 575V, 60 Hz, 1 Phase

Speed Reducers

Hollow Shaft Type

Speed
Reducers

How to
Select

How to select a Speed Reducer

Step 1: Collect data about your application
Before starting you need to know the:

- Application (e.g. Conveyor, Mixer, etc.)
- Hours of Operation per day
- Motor Horsepower (HP) and Speed (RPM)
- Desired Output Speed
- Mounting Position and Style
- Overhung or Thrust Loads
- Bore Dimensions, inch or metric
- Ambient Conditions

Step 2: Select a Frame Size
2A: Find the Load Classification of your application in the AGMA Load Classification Tables on pages 2.6. If the Hyponic® Reducer will be used in a frequent starts and stops application and the motor will be operated across the line, please refer to Method B on page 3.6.

2B: Find the recommended Service Factor using the Recommended Reducer Service Factor Table on the next page. For Recommended Service Factors for Frequent Start/Stop Applications, consult table on page 3.6.

2C: Determine the Selection Horsepower by multiplying the Motor Horsepower by the Service Factor.

2D: Select a Frame size from the Reducer Selection Tables on pages 2.8–2.18 by matching both the Selection Horsepower and Desired Output Speed (RPMs) to a frame size model number.

Step 3: Verify Dimensions
Use the Dimensions information on pages 2.20–2.31 to verify that the selected Frame Size is appropriate.

Step 4: Choose Options
The following options may apply:
Solid Shaft
Mounting Feet
Output Flange
Torque Arm Assembly
Washdown Modification
Refer to Section 4 of this catalog for dimension drawings of selected popular options .

Step 5: Configure a Model Number
Go to page 2.4 to configure a model number.
Note: You will use the information you gather from the procedure on this page to configure a model Number.
For additional options, please visit our configurator at: www.sumitomodrive.com/configurator

Speed
Reducers

How to
Select

Recommended Reducer Service Factors

		AGMA Load Classifications		
		Uniform (U)	Moderate Shock (M)	Heavy Shock (H)
Duration of Service	1/2 hr. per day (Occasional)	0.50 ^[1]	0.80 ^[1]	1.25
	3 hrs. per day (Intermittent)	0.80	1.00	1.50
	Up to 10 hrs. per day	1.00	1.25	1.75
	24 hrs. per day	1.25	1.50	2.00

Note: [1] Maximum momentary or starting load must not exceed 300% of gear reducer rating (rating meaning service factor of 1.0). Time specified for occasional and intermittent service refers to total operating time per day.

Determine Selection Horsepower (HP)

Motor HP X Service Factor = Selection HP

Example: 10 Motor HP X 1.25 Service Factor = 12.5 Selection HP

Select a Frame Size

1 Match your OUTPUT RPM (or RATIO)...

Output RPM	350	250	175	146	117	87.5	70.0	58.3	43.8	35.0	29.2	21.9	17.5	Frame Size

Overhung Load lbs	—	—	—	—	—	—	—	—	—	—	661	683	—	

2 ...to your SELECTION HP...

3 ...to find your FRAME SIZE

If Overhung Load is present, it must be checked against the capacity of the selection.

For special circumstances affecting Frame Size selection such as:

- Overhung Load
- Shock Loading

Consult Appendix, pages 5.8.

Hyponic®

How to
Select

How to Select a Gearmotor

Step 1: Collect data about your application

Before starting you need to know the:

- Application (e.g. Conveyor, Mixer, etc.)
- Hours of Operation per day
- Motor Horsepower (HP) and Speed (RPM)
- Desired Output Speed
- Mounting Position and Style
- Overhung or Thrust Loads
- Bore Dimensions, inch or metric
- Electrical Specifications
- Ambient Conditions

Step 2: Select a Frame Size

2A: Find the Load Classification of your application in the AGMA Load Classification Tables on pages 3.6 and 3.7. If the Hyponic® Gearmotor will be used in a frequent starts and stops application and the motor will be operated across the line, please refer to Method B on page 3.6.

2B: Go to the Gearmotor Selection Table that corresponds to the desired Motor HP. Find the Output Speed closest to the desired output speed.

2C: For AGMA Load Classification Method A or C on page 3.6, locate the Service Class in the Gearmotor Selection Tables (starting on page 3.10) for your application and select the Frame Size SELECTION that matches the HP, Output Speed, and Service Class. For Method B, select the Frame Size SELECTION that matches HP, Output speed and Service Factor (NOTE: Service Factor should be equal or exceed to calculated Service Factor on Method B).

Step 3: Verify Dimensions

Use the Dimensions information on pages 3.36–3.46 to verify that the selected Frame Size is appropriate.

Step 4: Choose Options

The following options may apply:

Solid Shaft
Mounting Feet
Output Flange
Torque Arm Assembly
Washdown

Refer to Section 4 of this catalog for dimension drawings of selected popular options.

For additional options, please visit our configurator at:
www.sumitomodrive.com/configurator

Step 5: Configure a Model Number

Go to page 3.4 thru 3.5 to configure a model number.

Note: You will use the information you gather from the procedure on this page to configure a model number.

			1.49	II	1200	(5310)				1.50	II	1160	(5150)	2	1520	30	

For special circumstances affecting Frame Size selection such as:

- Overhung Load
- Shock Loading

See Technical Information section, page 5.8

If Overhung Load is present,
it must be checked against
the capacity of the selection.

Hyponic®

Nomenclature

Step 2A - AGMA Load Classifications: Gearmotors

Select Service factor by Method A or B or C:

Method A - Gearmotor Classification by LOAD

DURATION OF SERVICE	GEARMOTOR CLASS		
	UNIFORM LOAD	MODERATE SHOCK LOAD	HEAVY SHOCK LOAD
Intermittent 3 hours per day	Class I	Class I	Class II
Up to 10 hours per day	Class I	Class II	Class III
24 hours per day	Class II	Class III	—

Class I = Steady loads not exceeding normal motor rating, 8 to 10 hours a day. Moderate shock loads where service is intermittent (AGMA Service Factor: 1.0).

Class II = Steady loads not exceeding normal motor rating and 24 hours a day service. Moderate shock loads for 8 hours a day (AGMA Service Factor: 1.4).

Class III = Moderate shock loads for 24 hours a day or heavy shock loads for 8 hours a day (AGMA Service Factor: 2.0)

Note: Selections without an AGMA Class designation are torque based selections generally used for intermittent service.

Method B - Recommended Service Factors for Frequent Start-Stop Applications for EP Motors

For frequent start-stop applications with motor operated across the line, use the table below to determine the recommended service factor, and check the Motor Thermal Rating (Table 4.30) in Section 4. For determination of moment of inertia, see page 4.30.

Number of start-stops (Times/hour)	~ 10 hours/day			~24 hours/day		
	I	II	III	I	II	III
~10	1.00	1.15	1.50	1.20	1.30	1.65
~200	1.10	1.35	1.65	1.30	1.50	1.85
~500	1.15	1.50	1.80	1.40	1.65	2.00
1	1.00	1.15	1.50	1.20	1.30	1.65
~3	1.00	1.25	1.60	1.20	1.40	1.70
~10	1.00	1.35	1.70	1.20	1.50	1.80
~60	1.00	1.45	1.75	1.25	1.65	2.00

Three-phase motors from 1/8 HP to 3/4 (0.1 to 0.55 kW)

Premium Efficiency three-phase motors 1HP to 75 HP (0.75 to 55 kW), high-efficiency three-phase motors from 1/4 HP to 1/2 HP (0.2 to 0.4 kW)

Inertia (Moment of Inertia WR^2) Ratio = $\frac{\text{Total Moment of Inertia } (WR^2) \text{ as seen from motor shaft}}{\text{Moment of Inertia } (WR^2) \text{ of motor}}$

I = Allowable Inertia (WR^2) Ratio: Inertia Ratio ≤ 0.3

II = Allowable Inertia (WR^2) Ratio: $0.3 < \text{Inertia Ratio} \leq 3.0$

III = Allowable Inertia (WR^2) Ratio: $3.0 < \text{Inertia Ratio} \leq 10.0$

Note: 1. The number of start-stops includes brake or clutch operation times.
2. Consult us when starting under loaded conditions such as torque or radial load.
3. Consult us when start-stop frequency or Moment of Inertia Ratio exceeds that shown above.

Specification Inspection Items

- if there is a shoulder bolt or knockpin used on mating surface of reducer
- change in case material
- if using high frequency brake

Method C continued - Load Classification by APPLICATION

Application	Class		Application	Class		Application	Class		Application	Class	
	Up to 10 Hr. Per Day	24 Hr. Per Day		Up to 10 Hr. Per Day	24 Hr. Per Day		Up to 10 Hr. Per Day	24 Hr. Per Day		Up to 10 Hr. Per Day	24 Hr. Per Day
Agitators			Jig Drives	III	III	Tray Drives	II	III	Pullers		
Pure Liquids	I	II	Maneuvering Winches	II	–	Veneer Lathe Drives	Consult Factory		Barge Haul	III	III
Liquids and Solids	II	II	Pumps	III	III	Machine Tools			Pumps		
Liquids – Variable Density	II	II	Screen Drive	III	III	Bending Roll	II	II	Centrifugal	I	II
Semi-liquids – Variable Density	II	II	Stackers	II	II	Notching Press – Belt Driven	Consult Factory		Proportioning	II	II
			Utility Winches	II	–	Plate Planer	III	III	Reciprocating		
Blowers			Elevators			Punch Press – Gear Driven	III	III	Single Acting		
Centrifugal	I	II	Bucket – Uniform Load	I	II	Tapping Machines	III	III	3 or more		
Lobe	II	II	Bucket – Heavy Load	I	II	Other Machine Tools			Cylinders	II	II
Vane	I	II	Centrifugal Discharge	I	II	Main Drives	II	II	Double Acting		
Brewing and Distilling			Escalators	I	II	Auxiliary Drives	I	II	2 or more		
Bottling Machinery	I	II	Freight	I	II	Metal Mills			Cylinders	II	II
Brew Kettles – Continuous Duty	–	II	Gravity Discharge	I	II	Bridle Roll Drives	III	III	Single Acting		
Cookers – Continuous Duty	–	II	Man Lifts	Consult Factory		Draw Bench – Carriage	III	III	1 or 2 Cylinders	Consult Factory	
Mash Tubs – Continuous Duty	–	II	Passenger Service – Hand Lift	III	–	Draw Bench – Main Drive	III	III	Double Acting	Consult Factory	
Scale Hopper	II	II	Fans			Forming Machines	III	III	Single Cylinder		
Frequent Starts	II	II	Centrifugal	II	II	Pinch Dryer & Scrubber Rolls, Reversing	Consult Factory		Rotary – Gear Type – Lobe, Vane	I	II
Can Filling Machines	I	II	Cooling Towers	II	II	Slitters	II	II	Rubber Industry		
Cane Knives	II	II	Induced Draft	Consult Factory		Table Conveyors	II	III	Mixer	III	III
Car Dumpers	III	–	Forced Draft	II	II	Non-Reversing	II	III	Rubber Calender	II	II
Car Pullers – Intermittent Duty	I	–	Induced Draft	II	II	Reversing	–	III	Rubber Mill		
Clarifiers	I	II	Large (Mine, etc.)	II	II	Winding Reels – Strip	–	III	(2 or more)	II	II
Classifiers	II	II	Large Industrial	II	II	Wire Drawing & Flattening Machine	II	III	Sheeter	II	II
Clay Working Machinery			Light (Small Diameter)	I	II	Wire Winding Machine	II	II	Tire Building Machines		
Brick Press	III	III	Feeders			Mills, Rotary Type			Tire & Tube Press		
Briquette Machine	III	III	Apron	II	II	Ball	III	III	Openers		
Clay Working Machinery	II	II	Belt	I	II	Cement Kilns	II	II	Tubers & Strainers	II	II
Pug Mill	II	II	Disc	I	II	Dryers & Coolers	II	II	Sewage Disposal		
Compressors			Reciprocating	III	III	Kilns	III	III	Equipment		
Centrifugal	I	II	Screw	II	II	Pebble	III	III	Aerators	Consult Factory	
Lobe	II	II	Food Industry			Rod	III	III	Bar Screens	I	II
Reciprocating	II	II	Beet Slicer	I	II	Tumbling Barrels	III	III	Chemical Feeders	I	II
Multi-Cylinder	II	II	Cereal Cooker	II	II	Mixers			Collectors, Circuline or Straightline	I	II
Single Cylinder	III	III	Dough Mixer	II	II	Concrete Mixers, Continuous	II	II	Dewatering Screens	II	II
Conveyors – Uniformly Loaded or Fed			Meat Grinders	II	II	Concrete Mixers, Intermittent	I	–	Grit Collectors	I	II
Apron	I	II	Generators – (Not Welding)	I	II	Constant Density	I	II	Scum Breakers	II	II
Assembly	I	II	Hammer Mills	III	III	Variable Density	II	II	Slow or Rapid Mixers	II	II
Belt	I	II	Laundry Washers	II	II	Oil Industry			Sludge Collectors	I	II
Bucket	I	II	Reversing	II	II	Chillers	II	II	Thickeners	II	II
Chain	I	II	Laundry Tumblers	II	II	Oil Well Pumping	Consult Factory		Vacuum Filters	II	II
Flight	I	II	Line Shafts			Paraffin Filter Press	II	II	Screens		
Oven	I	II	Heavy Shock Load	III	III	Rotary Kilns	II	II	Air Washing	I	II
Screw	I	II	Moderate Shock Load	II	II	Paper Mills			Rotary – Stone or Gravel	II	II
Conveyors – Heavy Duty Not Uniformly Fed			Uniform Load	I	II	Aerators	Consult Factory		Traveling Water Intake	I	II
Apron	II	II	Lumber Industry			Agitators (Mixers)	II	II	Slab Pushers	II	II
Assembly	II	II	Barkers – Spindle Feed	Consult Factory		Barker Auxiliaries, Hydraulic	Consult Factory		Steering Gear	II	II
Belt	II	II	Barkers – Main Drive	Consult Factory		Barker Mechanical	Consult Factory		Stokers	I	II
Bucket	II	II	Conveyors – Burner	II	III	Barking Drum	Consult Factory		Textile Industry		
Chain	II	II	Conveyors – Main or Heavy Duty	II	III	Beater & Pulper	–	II	Batchers	II	II
Flight	II	II	Conveyors – Main Log	III	III	Bleacher	–	II	Calenders	II	II
Live Roll (Package)	I	II	Conveyors – Merry-Go-Round	II	III	Calenders	–	II	Card Machines	II	II
Oven	II	II	Conveyors – Slab	III	III	Calenders – Super	–	II	Cloth Finishing Machines		
Reciprocating	III	III	Conveyors – Transfer	II	II	Converting Machines, except Cutters, Platers	–	II	(Washers, Pads, Tenters)		
Screw	II	II	Conveyors – Waste	II	II	Conveyors	–	II	(Dryers, Calenders, etc.)	II	II
Shaker	III	III	Chains – Floor	II	III	Conveyors, Log	–	III	Dry Cans	II	II
Cranes and Hoists			Chains – Green	II	III	Cutters, Platers	–	II	Dryers	II	II
Main Hoists	III	III	Cut-Off Saws – Chain	II	III	Cylinders	–	II	Dyeing Machinery	II	II
Heavy Duty	III	III	Cut-Off Saws – Drag	II	III	Dryers	–	II	Knitting Machines (Looms, etc.)	Consult Factory	
Medium Duty	II	II	Debarking Drums	Consult Factory		Felt Stretcher	–	II	Looms	II	II
Reversing	II	II	Feeds – Edger	III	III	Felt Whipper	–	III	Mangles	II	II
Skip Hoists	II	II	Feeds – Gang	III	III	Jordans	–	II	Nappers	II	II
Trolley Drive	II	II	Feeds – Trimmer	II	III	Presses	–	II	Pads	II	II
Bridge Drive	II	II	Log Deck	III	III	Pulp Machines, Reel	–	II	Range Drives	Consult Factory	
Crushers			Log Hauls – Incline Well Type	III	III	Stock Chests	–	II	Slashers	II	II
Ore	III	III	Log Turning Devices	II	III	Suction Roll	–	II	Soapers	II	II
Stone	III	III	Planer Feed	II	III	Washers and Thickeners	–	II	Spinnners	II	II
Dredges			Planer Tilting Hoists	II	III	Winders	–	II	Teneter Frames	II	II
Cable Reels	II	–	Rolls – Live – Off Brg. – Roll Cases	III	III	Printing Presses	I	II	Washers	II	II
Conveyors	II	II	Sorting Table	II	III				Winders (Other than Batches)	II	II
Cutter Head Drives	III	III	Tipple Hoist	II	III				Yarn Preparatory Machines (Cards, Spinners, Slashers, etc.)	II	II
			Transfers – Chain	II	III				Windlass	II	II
			Transfers – Craneway	II	III						

Hyponic®

AGMA Tables

Constant Torque Speed Ranges: Gearmotors

Table 2.8 Turn Down Ratio (CTSR) for Integral Motors in CONSTANT TORQUE Applications Powered by Inverters.

Fractional HP Motors - 60 Hz				
Motor Power	Standard Motor		AF Motor	
(4 - Pole)	W/o Brake	With Brake	With Brake	
1/8 HP (0.1 kW)	2:1	2:1	10:1	10:1
1/4 HP (0.2 kW)	2:1	2:1	10:1	10:1
1/3 HP (0.25 kW)	2:1	2:1	10:1	10:1
1/2 HP (0.4 kW)	2:1	2:1	10:1	10:1
3/4 HP (0.55 kW)	2:1	2:1	10:1	10:1

Premium Efficiency Integral HP Motors - 60 Hz			
Motor Power	Standard Motor		Oversized Motor (SSC YA01)
(4 - Pole)	W/o Brake	With Brake	With Brake
1 HP (0.75 kW)	10:1	10:1	
1.5 HP (1.1 kW)	10:1	5:1	10:1
2 HP (1.5 kW)	10:1	4:1	10:1
3 HP (2.2 kW)	10:1	4:1	10:1
5 HP (3.7 kW)	10:1	4:1	10:1
7.5 HP (5.5 kW)	10:1	4:1	10:1
10 HP (7.5 kW)	10:1	6:1	10:1
15 HP (11 kW)	10:1	6:1	10:1

For motor selection considerations for inverter (VFD) operation please refer to pages 5.27 and 5.28.

Note: [1] Selections with service factor marked with an asterisk (*) should be limited to the identified output torque.
[2] Maximum allowable input speed is 3600rpm unless otherwise noted.
Variable Frequency Drive (VFD) notes (see page 3.8 for Constant Torque Speed Ranges)
All 1HP+ motors require EP suffix in model number and can be used with a VFD, unless noted.

Notes: [1] Special maximum bore size for frame size 1420 and 1430 is 1-7/16"; maximum bore size for frame sizes 1440 is 1-3/8".
[2] Standard shaft dimension for double extended type shaft.
[3] Plug-in shaft only, not available with foot.

Shrink Disc

A shrink disc provides a reliable, keyless, high-strength connection to the driven shaft with zero backlash. It is ideal for applications that typically require an interference between the shaft and hollow bore. Sumitomo strongly recommends a shrink disc for applications involving frequent starts per hour.

When ordering, use the Special Specification Code (SSC) R61 for right side (when viewed from the motor end), or R62 for left side (when viewed from the motor end).

The user shaft should conform to JIS h6 tolerances. Shafts outside that range may not develop sufficient clamping force. The shaft surface finish should be between 63 to 125 micro-inches RMS.

Shrink Disc Availability:
Not available for 5:1 ratio, frame sizes 1120~1521.
Not available for 10:1 ratio, frame sizes 1630 to 1633.

Notes: † Modification list prices are in addition to base unit list price.

* Available from Glendale Heights, IL only. UltraSHIELD360 available for Quill only

Stainless Steel Solid Shaft - maximum torque ratings with standard solid shaft diameters are the same as those listed in this catalog for standard models.

Consult the factory when ordering smaller than standard diameters, or if there will be overhung load.

* UltraShield360™ available in quill input option only

Low Temp Package = -30 degrees C Maximum. For lower temperature requirements consult factory.

High Temp Package = 50 degrees C Maximum. For higher temperature requirements consult factory.

Exact Ratios

The exact reduction ratios for the Hyponic can be calculated given the number of gear teeth in a reduction stage.

Per reduction stage, the reduction ratio is determined by dividing the number of teeth in the gear by the number of teeth in the pinion. The overall gearbox reduction ratio is the product of the individual stage reduction ratios.

Overall Reduction Ratio = $i_{\text{OVERALL}} = (1\text{ST}_{\text{GEAR}} / 1\text{ST}_{\text{PINION}}) (2\text{ST}_{\text{GEAR}} / 2\text{ST}_{\text{PINION}}) (3\text{ST}_{\text{GEAR}} / 3\text{ST}_{\text{PINION}}) (4\text{ST}_{\text{GEAR}} / 4\text{ST}_{\text{PINION}})$

- where:
- $1\text{ST}_{\text{GEAR}}, 1\text{ST}_{\text{PINION}}$ = Tooth count of first stage pinion and gear respectively
 - $2\text{ST}_{\text{GEAR}}, 2\text{ST}_{\text{PINION}}$ = Tooth count of second stage pinion and gear respectively
 - $3\text{ST}_{\text{GEAR}}, 3\text{ST}_{\text{PINION}}$ = Tooth count of third stage pinion and gear respectively (if applicable)
 - $4\text{ST}_{\text{GEAR}}, 4\text{ST}_{\text{PINION}}$ = Tooth count of fourth stage pinion and gear respectively (if applicable)

Information

Special Load Guidelines Overhung Load

Reducer/Gearmotor Allowable Overhung Load

When a sprocket, sheave, or gear is mounted on the shaft of a reducer, an overhung load is applied on that shaft. It is necessary to check if the shaft of the Hyponic® Speed Reducer will allow the overhung load. Calculate the overhung load using this formula:

$$Pr = \frac{TI}{R} \leq \frac{Pro}{Lf \cdot Cf \cdot Fs} \quad (\text{lbs, N})$$

LEGEND

- Pr: Actual radial load (lbs, N)
 TI: Actual transmitted torque on slow speed shaft of reducer (lb-in, N-m)
 R: Pitch circle radius of sprocket, gear, pulley, ect. (inch, meter)
 Pro: Allowable radial load (lbs, N)
 Cf: Coupling factor
 Fs: Shock factor
 Lf: Load Location factor = 1.0

Table 5.4 Load Connection Factor

Type of Connection		Cf
General Purpose Chain	Single Row	1.00

Mounting

Recommended Shaft Tolerances for Hollow Bore Hyponic®

According to JIS standard and based on loading conditions, recommended shaft tolerances for hollow bore Hyponic® are:

- Steady, uniform loads: **JIS h6/js6 (low shock load)**
- Shock load or large overhung load: **JIS js6/k6 (high shock load)**
- Snap ring size is in accordance with: **JIS B2804C**

Refer to tables 5.15 and 5.16 for corresponding shaft diameters.

Table 5.14 Metric Bore Shaft Diameters (mm)

Bore Size	Low Shock Load JIS h6/js6		High Shock Load JIS js6/k6

Accessories Torque Arm continued

Figure 5.12 Hyponic® Torque Arm Mounting Examples

Hyponic®

Technical
Information

Accessories Torque Arm continued

Torque Arm Mounting:

- 1. Attach the torque arm to the Hyponic® casing on the machine side using hex socket head cap screws. Refer to Table 5.18 for bolt sizes.
- 2. Leave some clearance between the torque arm and machine, and the torque arm and mounting bolt, so excessive force will not be applied to the Hyponic® and driven shaft. 3. For frequent start/stop applications, or repeated normal/reverse operations, use a rubber bushing between the torque arm and mounting bolt (or spacer) to absorb the shock.

Table 5.18 Torque Arm Bolt Sizes

Model	Bolt
1120, 1230	M8
1220, 1330, 1340	M10
1320, 1430, 1440	M12
1420, 1530, 1531	M16

Figure 5.13 Hyponic® Torque Arm Clearance

Lubrication

Hyponic® drives are filled with long-life grease and sealed, so replenishment is unnecessary, but overhaul in approximately 20,000 hours or three to five years of operation will provide longer service life. Operating conditions affect oil seal durability. Under severe conditions, they may require changing in less than 20,000 hours or three years of operation. Gearmotors must be overhauled at factory-authorized locations.

Table 5.19 Hyponic Greases

Grease	Description	Temperature Range
Nihon Koyu BA-11A	Standard Grease	14°F to 104°F (-10°C to 40°C)
Nihon Koyu BH-17B	Low Temperature Grease	-22°F to 14°F (-30°C to -10°C)
Cassida-SGG 000	Food Grade Grease	14°F to 104°F (-10°C to 40°C)

Paint and Rust-proofing Specifications

Table 5.20 Paint Specifications

Paint Classification	Coating Name	Paint Color	Resin Type	Dry Time (hrs.)
Food and Beverage Industry Antimicrobial Powder Coating (standard)	Dupont Alesta	Silver Freeze	TGIC-Polyester	—
SMA Blue Paint (optional)	DTM Water-Based Enamel	Blue	Water-Based Acrylic Polymer	1 – 1½
Epoxy (optional)	Heavy-Duty Epoxy	Blue	Polymide Converted Epoxy	4 – 6
FDA-USDA (optional)	Food and Beverage Industry Coating	High Gloss White or Silver	Modified Alkyd	4 – 7

- All completely assembled models receive rust-proofing treatment prior to shipment.
- All models for export receive rust-proofing treatment that is effective for 12 months. Please specify “export Rust-proofing” for all export models.
- Please consult factory for storage longer than those listed in Table 5.21 or in the event of adverse storage conditions.

Table 5.21 Rust-proofing Specifications

Rust-Proofing Period	1 Year
Storage Condition	Indoor environment that is relatively free of humidity, dust, extreme temperature fluctuation, corrosive gas, etc.

Time Rating	Continuous
Frame Material	Diecast Aluminum
Enclosure Type	1/8 HP - TENV, 1/4 HP - 15 HP - TEFC
Enclosure Rating	IP55 Outdoor and Indoor Neoprene v-ring, gaskets and slinger shaft seals
Conduit Box	Outdoor Gasketed Oversized Diecast Aluminum, NPT Conduit Thread (Optional Indoor Steel)
Certification	UL Recognition, CSA Certification, CE Marked
Inverter Compatibility	Motor Insulation MG1 Part 31 Compliant
Constant Torque Speed Range	See Below
Overspeed Operation	Up to 120 Hz Check Reducer and Driven Equipment Overspeed Rating!
Motor Bearings	Double shielded, Deep Groove, Sealed for Life, CM Reduced Clearance Ball Bearings
Fan Guard (TEFC)	Steel
Fan (TEFC)	1/8 - 3/4 HP (PBT) 1 - 15 HP (Nylon Resin - PA66 with 30% Glass Fiber)
Lifting Provisions	(1 - 15 HP) Eyebolt

Hyponic®

Technical
Information

Feature	Non-Brake Motor	Brake Motor
Constant Torque Speed Range	See page 3.8 for table.	See page 3.8 for table.
208V Motor Power	Usable on 208V Network	Motor usable on 208V network but supply 230V for brake control
Brake Power Supply	-----	230 / 460 Volts, 60 Hz, 1 phase 575 Volts, 60 Hz, 1 phase
Brake Insulation	-----	Class F
Manual Brake Release Mechanism	-----	1/8 - 1/2 HP - no release mechanism 3/4 - 15 HP - one-touch lever type release

Motor

Conduit Box Mounting Direction

The conduit box mounting direction may be changed in 90° increments. A mounting direction other than standard must be specified when an order is placed and changed by the factory. When ordering, refer to Figure 5.14 for lead wire opening direction and mounting direction. The direction cannot be changed after shipment.

Figure 5.14 Conduit Box Mounting Direction – Three-Phase (Standard Motor and Inverter) and Single-Phase

Hollow Shaft Type RNYM Series	 
Solid Shaft Flange Mount Type RNFM Series	   
Solid Shaft Foot Mount Type RNHM Series	   

Motor Installation:
Fan/Brake Cover Clearance Requirements

Required gearmotor clearance dimension FA and FB for installation to achieve best performance and proper maintenance.

Dimension FA: Clearance necessary to remove fan cover or brake cover without moving the gearmotor.

Dimension FB: Minimum clearance to provide adequate airflow for ventilating the motor.

Notes: 1. In some cases, it may be necessary to move the gearmotor to remove the fan cover or brake cover.

Motor Selection Considerations for Inverter (VFD) Operation

Benefits:

Operating a three-phase AC Motor with an Inverter (Variable Frequency Drive – VFD) brings benefits to the design of a process control system:

- Extending a motor's acceleration time (soft starting) can greatly reduce motor starting current levels. Inrush current is limited typically to 150% of a motor's ampere ratings.
- Controlled and extended acceleration and deceleration rates reduce or eliminate the stress of high torque demands on the motor, reducer and driven load.
- Motor speed can be infinitely adjusted electronically to operate the process at the optimum speed.
- Full-rated motor torque levels can be applied to the load over as much as a 10:1 speed range (6 to 60 Hz, approximately 180 to 1800 RPM motor shaft speed). *(See note on next page about Constant Torque Speed Range)*
- Overspeed operation: within the operating limits of the motor, reducer and driven load, motor speed range can be extended beyond 60 Hz (1800 RPM). *(See note on next page about Constant Horsepower Speed Range)*
- Regulation of motor speed and/or torque without additional feedback devices.
- A properly sized and adjusted Sensorless Flux Vector AC drive can regulate motor shaft speed to almost eliminate motor slip over the motor's entire loading range.
- Electronic programmable motor torque limiting.
- Electronic overload and short circuit protection for the motor.
- Electronic Reversing: upon command, a VFD will follow preprogrammed deceleration rate to stop motor and then follow acceleration rate to bring motor to commanded speed in reverse direction. No additional power or mechanical components needed to reverse the motor.
- Motor braking (up to 150% of motor rated torque level with optional VFD components).
NOTE: VFDs do not provide HOLDING brake capability. VFDs can be used to sequence a motor-mounted holding brake.
- Many VFDs include basic process control functions and easily interface with Programmable Logic Controllers for more advance process control schemes.
- Serial communication capability for remote monitoring of motor, VFD and process status.
- Within a small limited HP range, VFDs can be selected to power a three-phase 230V motor from a single phase 240V power feed.

Constant Torque Operation:

For most gearmotor applications, a constant-torque rated VFD is required.

Constant-torque rated VFDs carry various manufacturer designations:

- Constant Torque, Heavy Duty or Normal Duty.

All constant-torque rated VFDs carry a 60-second ampere overload capability level of 150% of the VFD's continuous output ampere rating.

VFDs that offer a 110% or 120% 60-second ampere overload capability are designed for variable-torque type loads like fans and pumps with propellers and impellers and are most likely undersized for gearmotor applications.

When a VFD applies power to a motor, it simultaneously varies both the applied motor voltage level (amplitude) and the motor frequency (Hz) so that the torque delivered at the motor shaft can be held constant from a motor's base speed (typically 60 Hz) down to below 20 Hz.

The lower frequency limit is dependent on the design complexity of the VFD:

Basic V/Hz control (6 Hz), Sensorless Vector control (0.6 Hz), full Flux Vector control (0.06 Hz).

To achieve the Vector levels of motor control, the VFD must control only one motor, the VFD and motor must be closely matched in power ratings and the VFD must be properly adjusted, perhaps even "tuned" to the motor.

Most electrical motors are not designed to operate continuously at such low frequencies.

(See note on next page about Constant Torque Speed Range)

Motor Selection Considerations for Inverter (VFD) Operation (cont.)

Constant Horsepower (CHP) Operation:

It may be possible to configure a VFD to operate a motor at speeds beyond the motor's base frequency (typically 60 Hz – 1800 RPM).

To avoid unsafe and unreliable operation, never power a motor, reducer or a driven load beyond the manufacturer's maximum safe operating speed.

See "Motor Specifications" on page (5.15) for the Sumitomo motor maximum operating speed rating.
Consult Sumitomo factory for the Hyponic reducer maximum operating speed rating.
Consult the manufacturer of the driven load for its maximum operating speed rating.

A motor's full-load power rating is the product of its full-load torque rating and its base speed rating.
A motor's power rating does not increase when it is operated above its base speed.

Operation above a motor's base frequency is called Constant Horsepower (CHP) operation.
When a motor is operated above its base frequency, its output torque capability drops as its frequency is increased.

Constant Torque Speed Range (CTSR):

Most motors are not designed to operate for prolonged periods of time at low speed (typically below 20 Hz).
Most motors (i.e TEFC) depend upon a motor shaft-mounted fan for ventilation.

When the motor is operating at low speed, this motor shaft-mounted fan does not provide sufficient air movement to keep the motor's internal temperature within proper operating limits.

Operating a motor continuously beyond its CTSR can result in premature motor failure.
Be sure to properly configure the VFD's motor overload protection to match the motor type.

Motors listed for control by a VFD at low speed have been specifically designed to dissipate the heat through means other than the motor shaft-mounted fan.

A motor's ability to operate continuously at low speed is defined by its CTSR or Constant Torque Speed Range.

Examples of a CTSR rating are: 4:1, 6:1, 10:1.

A motor with a CTSR rating of 4:1 can operate continuously at 15 Hz ($60 \text{ Hz} / 4 = 15 \text{ Hz}$).

A motor with a CTSR rating of 10:1 can operate continuously at 6 Hz ($60 \text{ Hz} / 10 = 6 \text{ Hz}$).

See "Constant Torque Speed Ranges: Gearmotors" on page 3.8 for the Sumitomo motor constant torque speed rating (CTSR).

Consult the instructional material supplied with the VFD for additional important information.

Standard Wiring Diagrams

Illustrated below are the wiring diagrams for our standard motors. For additional information please refer to the motor name plate. Due to changes in design features, this diagram may not always agree with that on the motor. If different, the motor diagram found inside the conduit box cover should be used.

30 (22)	75	65	55	50	875 (0.256)	926 (0.271)
40 (30)	55	40	17	10	1110 (0.326)	1170 (0.342)

Note: [1] % ED = Duty Cycle.

The calculated C x Z value (steps 1 – 3 outlined below) should be less than the allowable value listed in Motor Thermal Rating table above.

1. Obtain the C value:

$$C = \frac{I_M + I_L}{I_M}$$

I_M = Moment of Inertia of the Motor.
 I_L = Moment of Inertia of the Load as seen from the motor shaft.

2. Obtain the Z value (number of starts per hour):

- (a) Assume that one operating period consists of “on-time” t_a (sec.), “off-time” t_b (sec.) and the motor is started nr (times/cycle).

$$Z_r = \frac{3600 \cdot nr}{t_a + t_b} \text{ (times/hour)}$$

- (b) When inching, ni (times/cycle) is included in 1 cycling ($t_a + t_b$), the number of inching times per hour Z_i , is then included in the number of starts.

$$Z_i = \frac{3600 \cdot ni}{t_a + t_b} \text{ (times/hour)}$$

- (c) Calculate Z by adding Z_r to Z_i by the following formula.

$$Z = Z_r + \frac{1}{2} \cdot Z_i = \frac{3600}{t_a + t_b} \cdot \left(nr + \frac{1}{2} ni \right) \text{ (times/hour)}$$

3. Calculate C x Z (the product of C and Z)

Use the value of C obtained in Step (1) and value of Z obtained in Step (2).

4. Obtain the duty cycle %ED and compare calculated C x Z in the appropriate column from Motor Thermal Rating Table.

$$\%ED = \frac{t_a}{t_a + t_b} \cdot 100$$

t_a = on-time
 t_b = off-time

Motor continued

Brakemotor Characteristics

The brakemotor on Cyclo® gearmotors operates with direct current supplied by a dual voltage rectifier for 230/460V, or single voltage rectifier/power module for other noted voltages. Rectifier or power module is mounted in the motor conduit box.

When used for outdoor installations, standard brakemotor must be protected by a cover. Such covers are available from the factory, please inquire when ordering.

Note: Advise the factory when ordering if you require brake torque greater or lesser than those shown as standard in the Brakemotor Characteristics table below.

Brake Characteristics

FB-15E	15	11	80 (110)	1.6 ~ 1.8	0.5 ~ 0.6		10800	110.2	551.1

Notes: Above table applies to standard brake specification under standard brake torque. Special brakes may perform differently from those shown. Initial brake torque may be lower than specified brake torque. If this is the case, under light load start and stop the motor to wear-in the braking surface. To improve performance for positioning accuracy or lifting applications, consider using fast braking action circuit. If the brake is operated at a rate greater than the Allowable Brake Work Capacity, E₀, the brake performance may degrade or become inoperable.

[1] Also applies to wiring where brake is powered separately from the motor leads.

Table 5.43b Varistor Specification Table

Operating Voltage		220V	380V
Varistor Rated Voltage		AC300V	AC510V
Varistor Voltage		470V	820V
Rated Watt	FB-01A1, 02A1, 05A1	Over 0.4W	Over 0.4W
	FB-1E, 1D	Over 0.6W	Over 0.6W
	FB-1HE, 2E	Over 1.5W	Over 1.5W
	FB-3E, 4E	Over 1.5W	Over 1.5W
	FB-5E, 8E	Over 1.5W	Over 1.5W
	FB-10E, 8E	Over 1.5W	Over 1.5W

*optional 380V 50Hz Brake Available

Brake Rectifiers and Brake Power Modules**Table 5.44a Brake Rectifiers for Fractional Motors**

Brake Type	Motor Power HP x P	230V/460V Rectifier		575V Rectifier	
		Model Number	Part Number	Model Number	Part Number
FB-01A1	1/8 X 4	25FW-4FB3	EY477WW-01	10F-6FB3	EY498WW-01
FB-02A1	1/4 - 1/3 X 4				
FB-05A1	1/2 X 4				
FB-1D	3/4 X 4				
FB-20	3/4 X 4

FB-10E	7.5 x 4			15F-4FB1	EW397WW-01
FB-15E	11 x 4				

Hyponic®

Technical
Information

Warranty

Company warrants that (i) all new equipment and parts (collectively, "Equipment") sold by Company will conform to printed drawings and specification sheets issued by Company and (ii) are free of defects in material and workmanship for the time period shown in Table 1. The warranty period commences on the date of shipment of the Equipment by Company.

If, within the warranty period, Company receives from Buyer written notice of any alleged defect in any of the Equipment and, if the Equipment is found by Company not to conform with these warranties (after Buyer has provided Company a reasonable opportunity to perform any appropriate tests on the allegedly defective Equipment), Company will, at its sole option and expense, either repair or replace the Equipment. In all instances, Company reserves the right to require Buyer to deliver the Equipment for repair or replacement to a designated service center and require Buyer to pay all charges for inbound and outbound transportation and for services of any kind, diagnostic or otherwise, excepting only the direct and actual cost of Equipment repair or replacement. Warranty coverage is limited to parts and labor and does not include travel and other expenses. Buyer applications and use of the Equipment may require installation of safety features. Buyer is responsible for furnishing and installing guards or other safety equipment needed to protect operating personnel, even though such equipment may not be furnished by Company with the Equipment purchased. Equipment supplied, but not manufactured, by Company is warranted only to the extent of the original manufacturer's warranty.

Table 5.45 - Product Warranty

Product	Warranty Period (After Shipment)	Components Excluded
Cyclo® Speed Reducers and Gearmotors	2 Years	Normally Wearing Items
Cyclo® Bevel Buddybox Speed Reducers and Gearmotors	2 Years	Normally Wearing Items
Cyclo® Helical Buddybox Speed Reducers and Gearmotors	2 Years	Normally Wearing Items
Fine Cyclo® Speed Reducers	2 Years	Normally Wearing Items
Beier® Variator Mechanical Adjustable Speed Reducers	2 Years	Normally Wearing Items
Hyponic® Speed Reducers and Gearmotors	2 Years	Normally Wearing Items
Hedcon® Double Enveloping Worm Gear Speed Reducers	2 Years	Normally Wearing Items
Helical Shaft Mount Speed Reducers	2 Years	Normally Wearing Items
Rhytax®	2 Years	Normally Wearing Items
IB Series Servo Gearheads	1 Year	Normally Wearing Items
Astero Gearmotors	1 Year	Normally Wearing Items
Variable Frequency Inverters	1 Year	---
Paramax® Speed Reducers	2 Years	Normally Wearing Items
Compower Planetary Speed Reducers	1 Year	Normally Wearing Items
Hansen UniMiner	2 Years	Normally Wearing Items
Hansen P4	2 Years	Normally Wearing Items
Parts	1 Year	---
Repairs	1 Year	Normally Wearing Items
