Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Applications

The Altistart 48 soft start/soft stop unit is a controller with 6 thyristors used for torque-controlled soft starting and stopping of three-phase squirrel cage asynchronous motors, for power ratings between 4 and 900 kW.

It offers soft starting and deceleration functions along with machine and motor protection functions, as well as functions for communicating with control systems.

These functions are designed for use in the most common applications for centrifugal machines, pumps, fans, compressors and conveyors, which are primarily to be found in the construction, food and beverage and chemical industries. The high-performance algorithms of the Altistart 48 contribute significantly to its ruggedness, safety and ease of setup.

The Altistart 48 soft start/soft stop unit is a cost-effective solution which can:

- reduce machine operating costs by reducing mechanical stress and improving machine availability,
- reduce the stress on the electrical distribution system by reducing line current peaks and voltage drops during motor starts.
- The Altistart 48 soft start/soft stop unit offer comprises 2 ranges:
 - three-phase voltages 230 V to 415 V, 50/60 Hz,
 - three-phase voltages 208 V to 690 V, 50/60 Hz.

In each voltage range, the Altistart 48 soft start/soft stop units are sized for standard and severe applications.

Functions

The Altistart 48 soft start/soft stop unit **1** is supplied ready for use in a standard application with class 10 motor protection.

It comprises an integrated display terminal **2**, which can be used to modify the programming, adjustment or monitoring functions in order to adapt and customize the application to meet individual customer requirements.

■ Drive performance functions:

- exclusive Altistart torque control (patented by Schneider Electric),
- constant control of the torque supplied to the motor during acceleration and deceleration periods (significantly reducing pressure surges),
- ease of adjusting the ramp and the starting torque,
- option of bypassing the starter using a contactor **3** at the end of the starting period whilst maintaining electronic protection (bypass function),
- wide frequency tolerance for generator set power supplies,
- option of connecting the starter to the motor delta terminals in series with each winding.

■ Machine and motor protection functions:

- built-in motor thermal protection,
- processing of information from PTC thermal probes,
- monitoring of the starting time,
- motor preheating function,
- protection against underloads and overcurrents in steady state.

■ Functions to ease integration into control systems:

- 4 logic inputs, 2 logic outputs, 3 relay outputs and 1 analog output,
- plug-in I/O connectors,
- function for configuring a second motor and easy-to-adapt settings,
- display of electrical values, the state of the load and the operating time,
- RS 485 serial link for connection to Modbus serial link.

Advantage of starting with Altistart 48

■ Conventional electronic starting

To resolve problems such as:

- mechanical stress on starting,
- hydraulic transients on acceleration and deceleration in pumping applications, conventional electronic starting methods use a number of current limits, or switch several voltage ramps.

This makes adjustment complex and it has to be modified each time the load changes.

■ Starting with the Altistart 48

Altistart 48 torque control enables starting without mechanical stress and smooth control of hydraulic transitions, with a single acceleration ramp.

Making adjustments is quick and easy, whatever the load.

Options

- A remote terminal can be mounted on the door of a wall-fixing or floor-standing enclosure **4**.
- SoMove setup software for PC **5**:

SoMove software incorporates various functions for the device setup phases:

- configuration preparation,
- commissioning,
- maintenance.

For more detailed information, please consult our “SoMove - Setup software for motor control devices” specialist catalogue which can be downloaded from our website www.schneider-electric.com.

- A wiring accessories offer making it easy to connect the starter to PLCs on a Modbus serial link connection **6**.
- Communication options for Ethernet, Fipio, DeviceNet and Profibus DP buses and networks.

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Selection criteria for an Altistart 48 soft start/soft stop unit

The Altistart 48 should be selected on the basis of 3 main criteria:

- Two line supply voltage ranges are available for selection:
 - 3-phase AC supply: 230 – 415 V,
 - 3-phase AC supply: 208 – 690 V.
- The power and nominal current on the motor rating plate.
- The type of application and the operating cycle.
To simplify selection, applications are categorized as one of 2 types:
 - standard applications,
 - severe applications.Standard or severe applications define the limit values of the current and the cycle for motor duties S1 and S4.

Standard application

In standard applications, the Altistart 48 is designed to provide:

- Starting at 4 I_n for 23 seconds or at 3 I_n for 46 seconds from cold state (corresponding to motor duty S1).
- Starting at 3 I_n for 23 seconds or at 4 I_n for 12 seconds with a load factor of 50% and 10 starts per hour or an equivalent thermal cycle (corresponding to motor duty S4).

The motor thermal protection must conform to protection class 10.
Example: centrifugal pump.

Severe application

In severe applications, the Altistart 48 is designed to provide:

- Starting at 4 I_n for 48 seconds or at 3 I_n for 90 seconds from cold state (corresponding to motor duty S1).
- Starting at 4 I_n for 25 seconds with a load factor of 50% and 5 starts per hour or an equivalent thermal cycle (corresponding to motor duty S4).

The motor thermal protection must conform to protection class 20.
Example: grinder.

Motor duties

S1 motor duty is based on starting followed by operation at constant load, making it possible to achieve thermal equilibrium.

S4 motor duty is based on a cycle consisting of starting, operation at constant load and an idle period.

This cycle is characterized by a load factor of 50%.

Selecting the starter

Once the appropriate application has been selected from the following page, select the starter from page 10 according to the supply voltage and the motor power.

Caution:

If the Altistart 48 is installed inside an enclosure, observe the mounting and derating recommendations.

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Application areas

Depending on the type of machine, the applications are categorized as standard or severe based on the starting characteristics, which are given as examples only, in the table below.

Type of machine	Application	Functions performed by the Altistart 48	Starting current (% I _n)	Starting time (s)
Centrifugal pump	Standard	Deceleration (reduction in pressure surges) Protection against underload or reversal of phase rotation direction	300	5 to 15
Piston pump	Standard	Control of pump priming and the pump's direction of rotation	350	5 to 10
Fan	Standard Severe if > 30 s	Detection of overloads caused by clogging or underloads (motor/fan transmission broken) Braking torque on stopping	300	10 to 40
Cold compressor	Standard	Protection, even for special motors	300	5 to 10
Screw compressor	Standard	Protection against reversal of phase rotation direction Contact for automatic draining on stopping	300	3 to 20
Centrifugal compressor	Standard Severe if > 30 s	Protection against reversal of phase rotation direction Contact for automatic draining on stopping	350	10 to 40
Piston compressor	Standard	Protection against reversal of phase rotation direction Contact for automatic draining on stopping	350	5 to 10
Conveyor, transporter	Standard	Monitoring of overloads for incident detection or underloads for break detection	300	3 to 10
Lifting screw	Standard	Monitoring of overloads for hard spot detection or underloads for break detection	300	3 to 10
Drag lift	Standard	Monitoring of overloads for jamming detection or underloads for break detection	400	2 to 10
Elevator	Standard	Monitoring of overloads for jamming detection or underloads for break detection Constant starting with variable load	350	5 to 10
Circular saw, band saw	Standard Severe if > 30 s	Braking for fast stop	300	10 to 60
Pulper, butchery knife	Severe	Torque control on starting	400	3 to 10
Agitator	Standard	The current display indicates the density of the material	350	5 to 20
Mixer	Standard	The current display indicates the density of the material	350	5 to 10
Grinder	Severe	Braking to limit vibrations during stopping, monitoring of overloads for jamming detection	450	5 to 60
Crusher	Severe	Braking to limit vibrations during stopping, monitoring of overloads for jamming detection	400	10 to 40
Refiner	Standard	Torque control on starting and stopping	300	5 to 30
Press	Severe	Braking to increase the number of cycles	400	20 to 60

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Special uses

Other criteria can influence selection of the Altistart 48 rating:

Starter wired to the motor delta terminals

In addition to the most frequently encountered wiring layouts, where the starter is installed in the line supply of the motor and the motor is connected in star or delta configuration, the Altistart 48 ATS48●●●Q can be wired to the motor delta terminals in series with each winding (see figure below). The starter current is lower by a ratio of $\sqrt{3}$ than the line current absorbed by the motor. This type of installation enables a starter with a lower rating to be used.

Example: For a 400 V/110 kW motor with a line current of 195 A (current indicated on the rating plate for the delta connection), the current in each winding is equal to $195/\sqrt{3}$ i.e. 114 A.

Select the starter rating with a maximum permanent nominal current just above this current, i.e. 140 A (ATS48C14Q for a standard application).

To avoid the need to do this calculation, simply use the table on page 11.

This type of installation only permits freewheel stopping and is not compatible with the cascade and preheating functions.

Starter wired in series with the motor windings

Note: The nominal current and limiting current settings as well as the current displayed during operation are on-line values (so do not have to be calculated by the user).

Caution: For this type of installation, observe the wiring scheme and the associated recommendations.

Starter bypassed by a contactor

The starter can be bypassed by a contactor at the end of starting (to limit the heat dissipated by the starter). The bypass contactor is controlled by the starter, and the current measurements and protective mechanisms remain active when the starter is bypassed.

The starter is selected on the basis of the 3 main criteria and one of the following criteria:

- If the starter is bypassed at the end of starting, the motor is always started from cold state and the starter can be oversized by one rating.
Example: Select an ATS 48D17Q for an 11 kW motor in a standard 400 V application.

- If the starter needs to be able to operate without the bypass contactor at the end of starting, it does not have to be derated.
Example: Select an ATS 48D17Q for a 7.5 kW motor in a standard 400 V application.

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Special uses (continued)

Motors in parallel

Motors may be connected in parallel provided that the power limit of the starter is not exceeded (the sum of the motor currents must be less than the nominal current of the starter chosen according to the type of application). Provide thermal protection for each motor.

Slip-ring motors

The Altistart 48 can operate with a bypassed rotor resistance motor or with a threshold resistor. The starting torque is modified according to the rotor resistance. If necessary, keep a low-value resistor in order to obtain the required torque to overcome the resistive torque on starting.

A bypassed slip-ring motor has very low starting torque. A high stator current is required to obtain sufficient starting torque.

Oversize the starter in order to have a limiting current 7 times that of the nominal current.

Note: Ensure that the motor starting torque, equal to 7 times the nominal current, is greater than the resistive torque.

Comment: The Altistart 48 torque control enables excellent soft starting despite the limiting current being 7 times the nominal current required to start the motor.

Dahlander motor and 2-speed motor

The Altistart 48 can operate with a 2-speed motor. A motor demagnetization period must elapse before changing from low speed to high speed in order to avoid antiphases between the line supply and the motor, which would generate very high currents.

Select the starter using the 3 main criteria.

Very long cable

Very long motor cables cause voltage drops due to the resistance of the cable. If the voltage drop is significant, it could affect the current consumption and the torque available. This must therefore be taken into account when selecting the motor and the starter.

Starters in parallel on the same line supply

If several starters are installed on the same line supply, line chokes should be installed between the transformer and the starter (see page 27).

Recommendations for use

Caution: Do not use the Altistart 48 upstream of loads other than motors (for example, transformers and resistors are forbidden).

Do not connect power factor correction capacitors to the terminals of a motor controlled by an Altistart 48.

(1) Value indicated on the motor rating plate.

(2) Corresponds to the maximum continuous current in class 10.

(3) Corresponds to the maximum continuous current in class 20.

(4) For this type of connection, the factory setting current must be adjusted in line with the current indicated on the motor rating plate.

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Line voltage 208...690 V
Motor power given in HP

ATS48D17Y

ATS48C14Y

ATS48M12Y

For standard applications

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units Communication options

Modbus serial link

The Altistart 48 is connected directly to the Modbus bus via its RJ45 connector port. This port supports the RS 485 (2-wire) standard and the Modbus RTU protocol. The communication function provides access to the starter's configuration, adjustment, control and signaling functions.

Connections via splitter boxes and RJ45 connectors

- 1 PLC (1).
- 2 Modbus cable depending on the controller or PLC type.
- 3 Modbus splitter box **LU9GC3**.
- 4 Modbus drop cables **VW3A8306R●●**.
- 5 Line terminators **VW3A8306RC**.
- 6 Modbus T-junction boxes **VW3A8306TF●●** (with cable).

Connections via tap junctions

- 1 PLC (1).
- 2 Modbus cable depending on the controller or PLC type.
- 3 Modbus cable **TSXCSA●00**.
- 4 Junction box **TSXSCA50**.
- 5 Subscriber socket **TSXSCA62**.
- 6 Modbus drop cable **VW3A8306**.
- 7 Modbus drop cable **VW3A8306D30**.

Connection via screw terminals

In this case, use a Modbus drop cable **VW3A8306D30** and line terminators **VW3A8306DRC**.

Other communication buses

The Altistart 48 can also be connected to Ethernet, Fipio, Profibus DP and DeviceNet networks via a module (bridge or gateway).

Communication on the network is used for:

- controlling,
- monitoring and,
- adjusting the connected Modbus devices.

Connection via modules

- 1 To network.
- 2 Communication modules.
- 3 Cables **VW3A8306R●●**, **VW3P07306R10** or **VW3A8306D30**.
- 4 Modbus splitter box **LU9GC3**.
- 5 Modbus drop cables **VW3A8306R●●**.
- 6 Line terminator **VW3A8306RC**.

LUFP1

LA9P307

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units
Options: remote terminal, line chokes and DNV kits

Remote terminal

The terminal can be mounted on the door of a wall-fixing or floor-standing enclosure. It has the same signaling display and configuration buttons as the terminal integrated in the starter. A menu access locking switch is located on the rear of the terminal.

The option comprises:

- the remote terminal,
- a mounting kit containing a cover, screws and an IP 54 seal on the front panel,
- a connection cable 3 m/9.84 ft long, with a 9-way SUB-D connector at the terminal end and an RJ45 connector at the Altistart 48 end.

- 1 Information is displayed in the form of codes or values in three 7-segment displays.
- 2 Buttons for scrolling through the menus or modifying values.
- 3 "ESC": Button for exiting the menus (no confirmation).
- 4 "ENT": Confirm button for entering a menu or confirming the new value selected.

Line chokes

The use of line chokes is recommended in particular when installing several electronic starters on the same line supply. The inductance values are defined for a voltage drop between 3% and 5% of the nominal line voltage. Install the line choke between the line contactor and the starter.

DNV kits

These kits enable ATS48D62...48M12 starters to meet the requirements of the DNV certification body. Each kit consists of the fixing pins and the parts necessary for mounting the starter (when mounting using the VW3G48107 kit a sling must be used, which is not included).

ATS48D17...48D47 starters are DNV certified and it is not necessary to add an optional kit.

Protective covers for power terminals

To be used with eyelet connectors

ATS48C14 and ATS48C17 soft start/soft stop units have 9 unprotected power terminals. These terminals can be fitted with protective covers for compliance with IP 20 degree of protection.

Soft starters for asynchronous motors

Altistart 48 soft start/soft stop units

Options: remote terminal, line chokes, DNV kits, protective covers and documentation
