## Product description

For positioning loads weighing tons with absolute precision on micrometers, powerful pressing, joining or closing and unrestricted motion sequence variation: The new electromechanical cylinders EMC Heavy Power (EMC-HP) from Rexroth exploit the advantages of modern control technology even at high forces.

The high rigidity of the units allows precise positioning in addition to high performance and dynamics. Users can seamlessly integrate the cylinders into intelligent energy management and in this way reduce power consumption and carbon emissions.

Parameters for force, position and travel speed can be set as required and flexibly adapted to new tasks at any time via the drive system. The electromechanical cylinders EMC-HP for heavy loads transmit the motor movement via ball or planetary screw assemblies depending on the dynamics and force requirements. Available in various sizes and leads, the highly precise Rexroth screw drives cover a wide range of needs in a cost-effectively manner. Rexroth offers the EMC-HP as ready-to-install, purely mechanical axes and as a complete system with a choice of precisely matched gear units, servo motors and drive controllers.

### Structural design

The mechanical system in the electromechanical cylinder EMC-HP is based on proven planetary screw assemblies in a wide range of diameter and lead combinations. A screw drive converts torque into linear motion with high mechanical efficiency. During this process, the piston rod fastened to the screw drive nut is extended and retracted. Both the nut and the piston rod are guided in the housing.

The piston rod-to-housing interface is optimally sealed to prevent dirt from working its way in.

The housing fulfills the requirements for protection class IP 65, the piston rod those for IP 54. The piston rod is protected against turning.

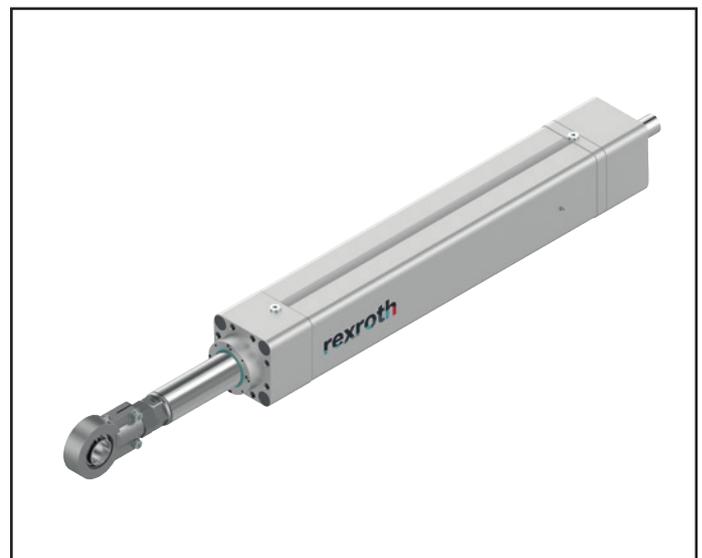

Integrated end position buffers protect the mechanical system during start-up. Switches are available as an option.

Limit switches prevent damage to the cylinder in operation. A reference point switch is available for the use of incremental encoder systems. A load measuring pin is available for the exact measurement of forces.

Electromechanical Cylinders EMC-HP require only minimum maintenance effort. The advantage of grease lubrication is that the screw drive can run long distances on one supply of grease. The oil bath lubrication entails the advantage of longer maintenance intervals.

### Advantages

- ▶ High energy efficiency and low negative environmental impact (no risk of leaks)
- ▶ Straightforward, compact and robust structural design for space-saving integration in machine concepts and usage even in harsh environmental conditions
- ▶ Complete building system with great variability for high flexibility in a broad range of applications
- ▶ Precise positioning, high dynamics, powerful drive and a long service life thanks to precision Rexroth planetary screw assemblies
- ▶ Smart, service-oriented, freely programmable drive system allows the realization of complex travel profiles (parameters for force, position and travel speed can be set as required over the complete working travel range)

### Condition as delivered

- ▶ The electromechanical cylinder EMC-HP is delivered as a completely assembled unit. The only parts not pre-assembled are pillow blocks, clevis brackets and the switches.

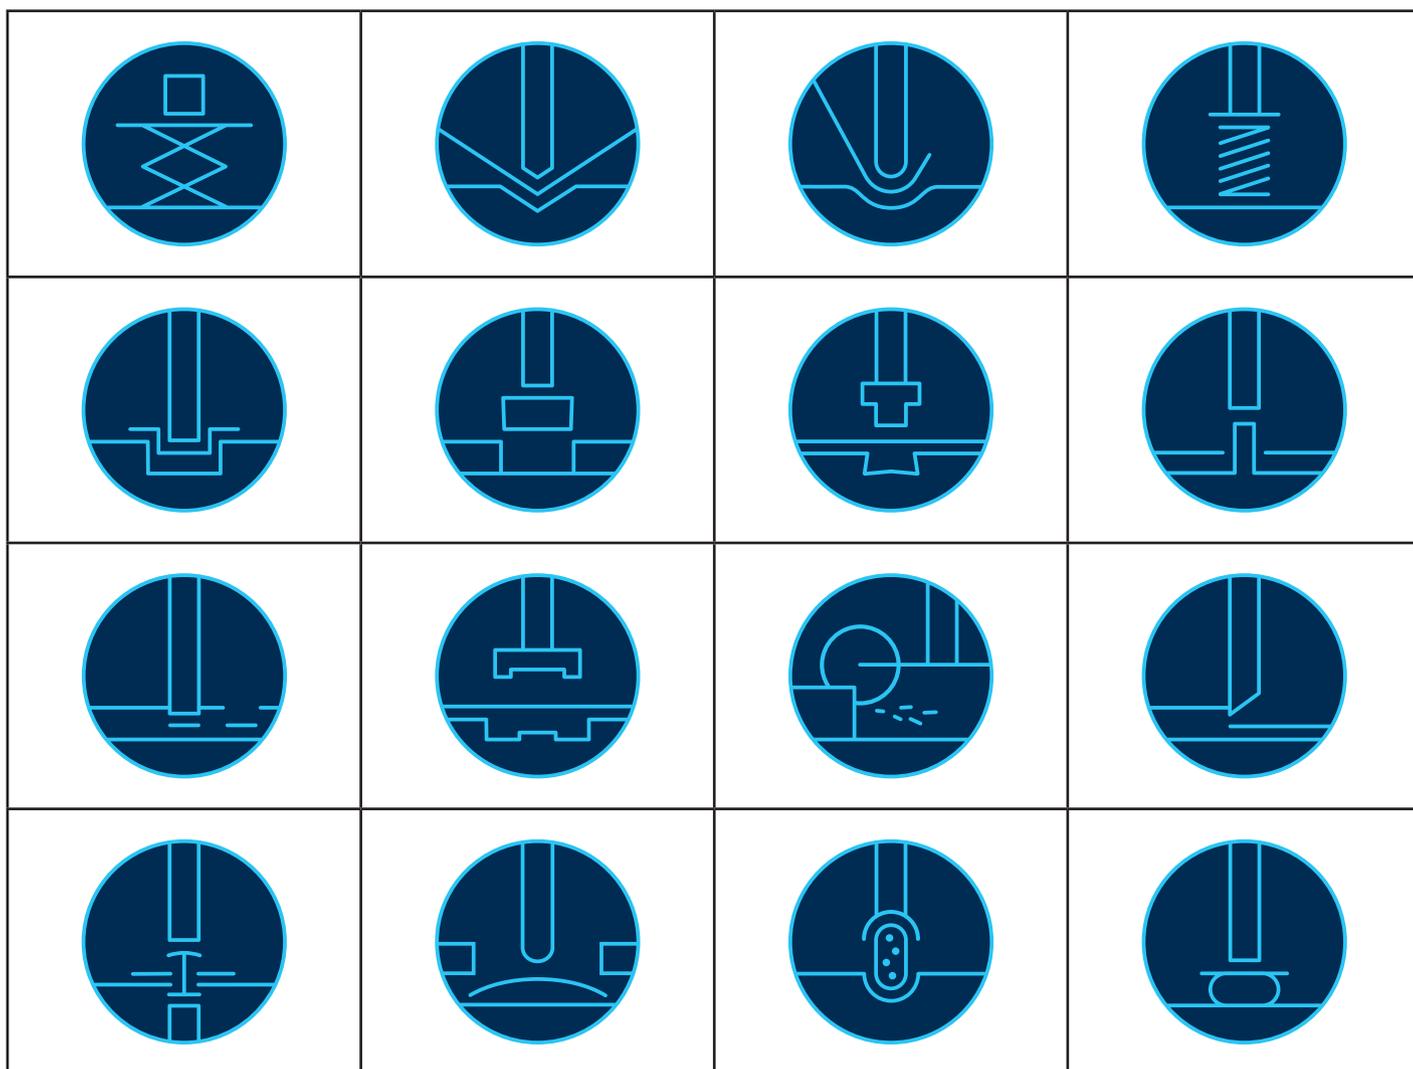

### Application areas

Electromechanical cylinders EMC-HP can be used in many application areas. Due to their specific characteristics, they offer advantages in terms of accuracy, dynamics and controllability, and can therefore not only help to shorten cycle times but also to increase flexibility and quality in the manufacturing process. Their space-saving design makes them ideal for use in tightly confined spaces.

Possible application areas are:

- ▶ Servo presses and forming technology
- ▶ Joining technology
- ▶ Thermoforming
- ▶ Injection molding and blow molding machines
- ▶ Woodworking machines
- ▶ Machine tools
- ▶ Assembly and handling technology
- ▶ Packaging machines and conveyor systems
- ▶ Testing equipment and laboratory applications
- ▶ Simulators
- ▶ Special machines

### Application examples: Bending, lifting, pressing, transporting, etc.

## Structural design

- 1 Threaded bolt (galvanized steel)
- 2 Lock nut (galvanized steel)
- 3 Piston rod (stainless steel)
- 4 Thread (for mounting fastening elements)
- 5 Cover (aluminum, anodized)
- 6 Housing (aluminum, anodized)
- 7 Screw journal
- 8 Base (aluminum, anodized)
- 9 Lube connection (on two sides)
- 10 Cover for T-slot for switches
- 11 Service openings

### Attachments

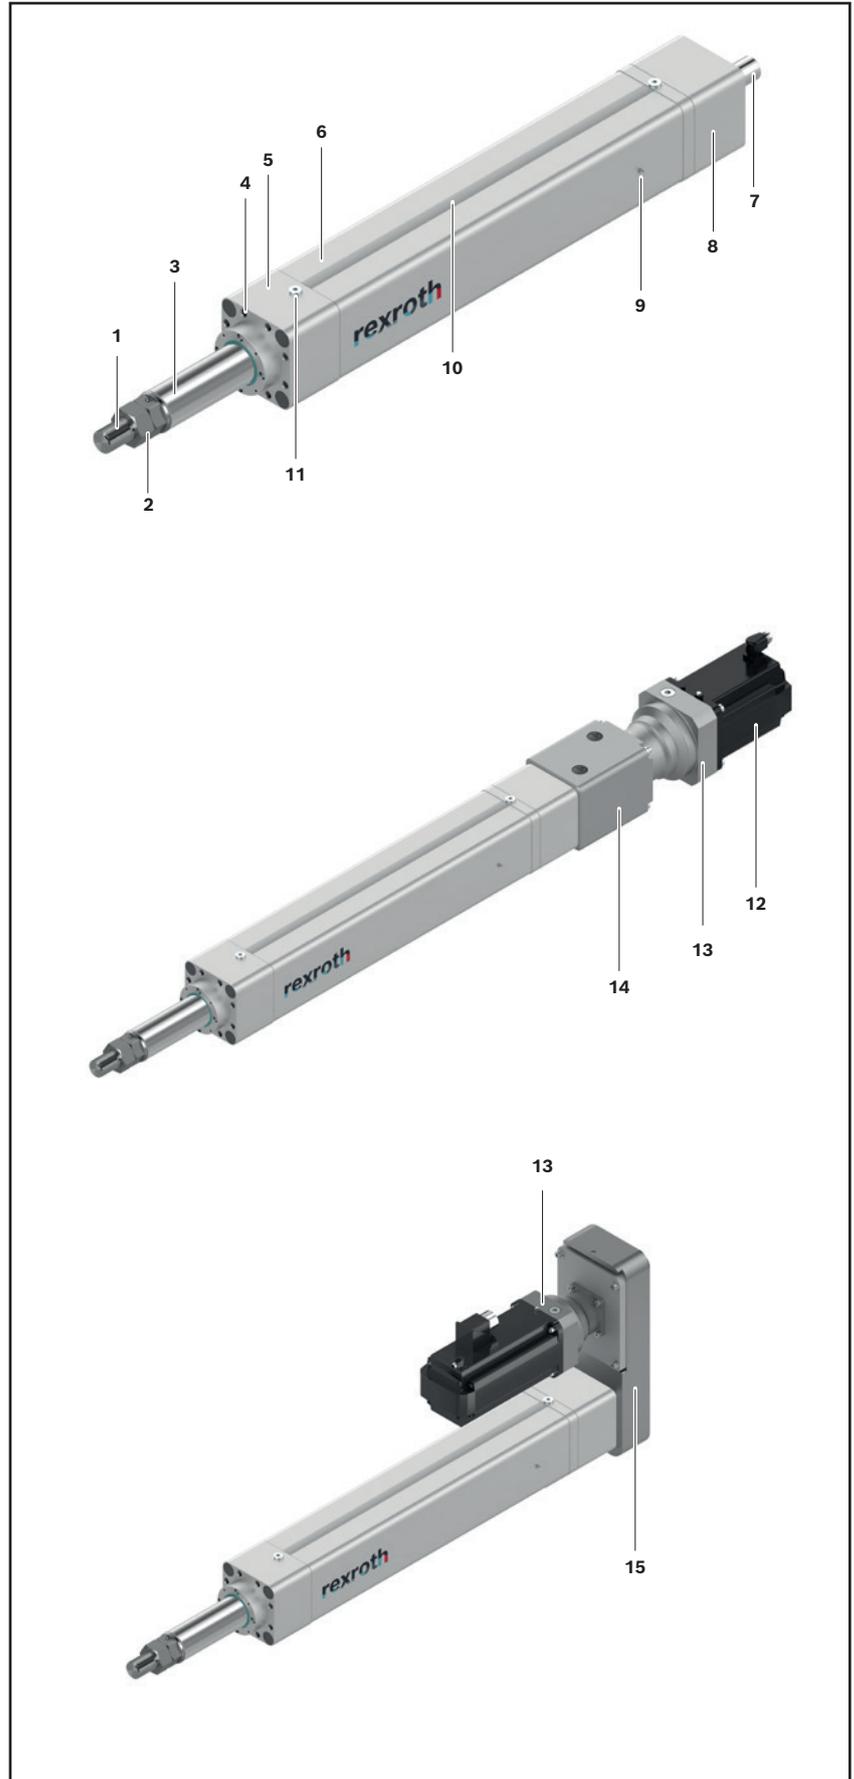

- 12 Motor
- 13 Gear (optional)
- 14 Flange (aluminum, anodized)
- 15 Belt side drive (aluminum, anodized)

### Motor flange and coupling

The motor flange is used to fasten the motor to the EMC and as a closed housing unit for the coupling. With the coupling, the drive torque of the motor is transmitted free of distortive stresses on the screw journal of the EMC.

### Belt side drive

This configuration results in the shortest overall length of the EMC possible. The space-saving, closed housing serves as protection for the belt, motor bracket and to connect fastening elements. Gear ratio  $i = 1 : 1.5$

# Technical data

## Dimensions, load ratings, maximum forces and masses

EMC-HP	PLSA $d_0 \times P$ (mm)	C (N)	$F_{max}$ (N)	$M_p$ (Nm)	$v_{max}$ (m/s)	$a_{max}$ (m/s <sup>2</sup> )	$s_{max}$ (mm)	$s_{min}$ (mm)	Trunnion		$n_p$ (min <sup>-1</sup> )
									without	with	
115	30 x 5	82 000	44 000	36.8	0.42	30	1 200	85	332.0	374	5 000
	30 x 10	82 000	41 000	65.7	0.83	30	1 200	85	332.0	374	5 000
130	39 x 5	120 000	65 000	60.7	0.32	30	1 500	110	364.0	420	3 850
	39 x 10	120 000	70 000	133.3	0.64	30	1 500	110	364.0	420	3 850
160	48 x 5	179 000	95 000	93.5	0.26	30	1 500	130	418.5	482	3 125
	48 x 10	179 000	100 000	198.9	0.52	30	1 500	130	418.5	482	3 125

### Note on dynamic load rating

In relation to the desired service life, an equivalent dynamic axial load of up to about 20% of the dynamic load rating (C) has generally proven effective. Do not exceed the technical data.

### Mass of the EMC-HP

Weight calculation without motor and without motor attachment\*)

$$m_s = k_{g \text{ fix}} + k_{g \text{ var}} \cdot s_{max}$$

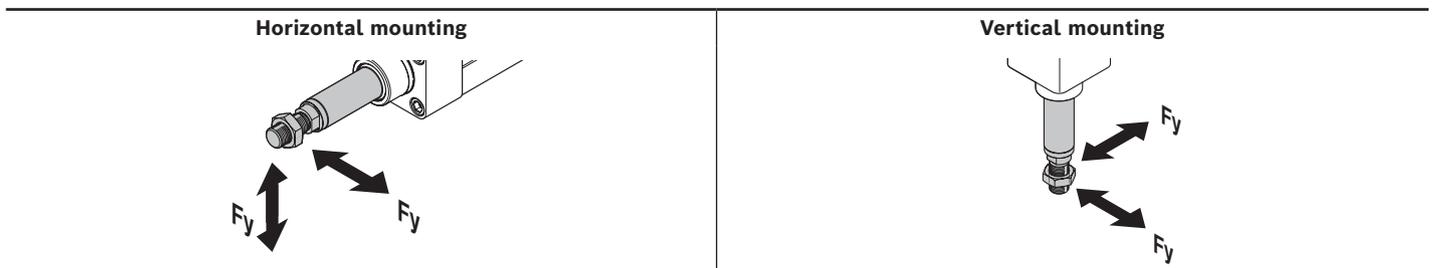

### Moved mass of system\*)

$$m_{ca} = m_{ca \text{ fix}} + m_{ca \text{ var}} \cdot s_{max}$$

\*) When calculating the mass of the entire system, the masses of the attachments/fastening elements must also be taken into account.

The indicated values apply in case of compliance with the specified relubrication intervals and to standard operation. For short stroke operation (stroke <  $s_{min}$ ), reduction factors must be taken into consideration. (see chapter "Operating conditions and application").

## Load on the piston rod

Loading the piston rod with transverse forces is not permissible

	$\eta$	$M_{Rs}$ (Nm)	$k_J$ fix	$k_J$ var	$k_{Jm}$	$m_s$		$m_{ca}$

3) Add mass for basis cylinder weight, figure per pair

**Note**

Trunnion bearing blocks are always supplied in pairs.

## Force sensor

### Clevis bracket with load measuring pin

#### Technical data

##### Metrological specifications

<b>Material</b>	Stainless steel
<b>Protection class</b>	IP 65
<b>Hardness (load range)</b>	38 HRC
<b>Mechanical system</b>	
<b>Operating load</b>	150% of MB
<b>Breaking load</b>	300% of MB
<b>Accuracy</b>	
<b>Non-linearity</b>	±0.5% of MB
<b>Repeatability</b>	±0.25% of MB
<b>Hysteresis</b>	±0.2% of MB
<b>Temperature drift at zero point</b>	±0.05% of MB/K.
<b>Temperature drift over measurement range</b>	±0.05% of MB/K.
<b>Compensated temperature</b>	+10 ... +40 °C
<b>Operating temperature</b>	-20 ... +60 °C

MB = Measurement range  
MB/K. = Measurement range per Kelvin

##### Electrical specifications

		EMC-HP
<b>Output signal</b>	0 kN	0 ±0.03 V
<b>Output signal</b>	MB	-10 ... 10 V ±0.2 V
<b>Power supply voltage</b>		24 ±2 V
<b>Tare (zero setting function)</b>		7.2 ... 24 V
<b>Current consumption</b>		max. 50 mA
<b>Bandwidth</b>		2.5 ±0.2 KHz
<b>Connection</b>		Connector M12x1

If your application requires precise load sensing, there is a clevis bearing block version with load measuring pin available for this purpose. This option can be selected both at the piston rod end connected to the spherical rod end bearing, and at the timing belt side drive connected to the swivel bearing.

Thanks to the thin-film technology used, the load cells are very robust and stable over the long term. The load cells are compliant with the EN 61326 standard for electromagnetic compatibility (EMC) and are designed to sense both tensile and compressive forces.

#### Note

The use of a hammer or press to fit the bolt is not permissible. It may only be inserted by hand.

The load measuring pin is not suitable for measuring torques and may therefore only be used with the cylinder option "Guideway with anti-twist feature".

It is secured axially and against rotation, like the standard bolt, on one side of the bearing block using the bolt locking feature included.

For force control at the controller level, a control component with an analog input is required.

Connection cable is included.

Output signal 4 - 20 mA, reduced measurement range and test certificate on request.

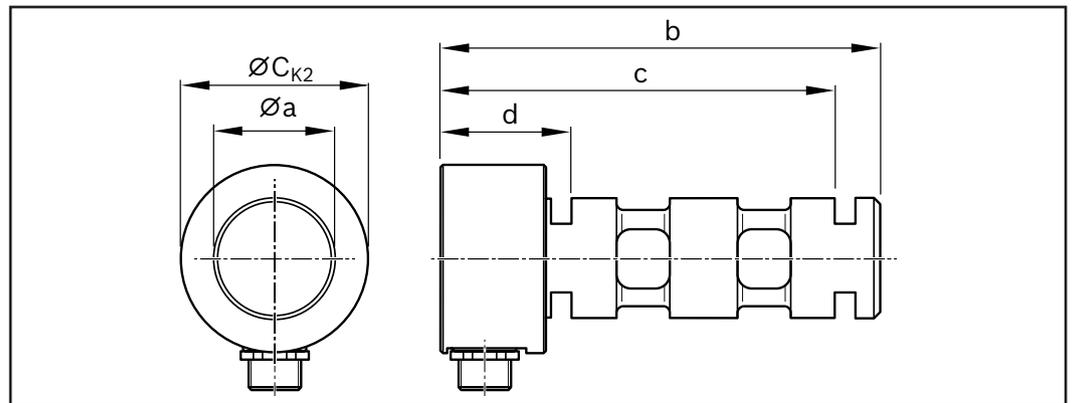

#### Technical data, connection cable

<b>Length</b>	5 m
<b>Rated voltage</b>	250 V
<b>Rated current</b>	4 A
<b>Plug outlet</b>	angled
<b>Connection type 1</b>	Female connector M12x1, 4-pin
<b>Connection type 2</b>	Flying leads
<b>Type of cable</b>	PUR black, shielded
<b>Suitable for drag chains</b>	ja
<b>Cable cross-section</b>	4x0,34 mm <sup>2</sup>
<b>Cable diameter D</b>	5.9 ±0.2 mm
<b>Static bending radius</b>	>10 x D
<b>Dynamic bending radius</b>	>5 x D
<b>Bending cycles</b>	> 2 Mio
<b>Ambient temperature, stationary</b>	-25 ... +80 °C
<b>Ambient temperature, in motion</b>	-40 ... +80 °C
<b>Protection class</b>	IP 65

**Features**

- ▶ For tensile and compressive forces
- ▶ Corrosion-resistant stainless steel version
- ▶ Integrated amplifier
- ▶ Low temperature coefficient
- ▶ High long term stability
- ▶ High shock and vibration resistance
- ▶ For dynamic or static measurements
- ▶ Good reproducibility
- ▶ Easy mounting

**Dimensions**

EMC-HP	Material number	Dimensions (mm)					Measurement range (kN)	Weight (kg)
		$\varnothing a$ f8	$\varnothing C_{k2}$	b	c	d

## Switching system

### Switching system

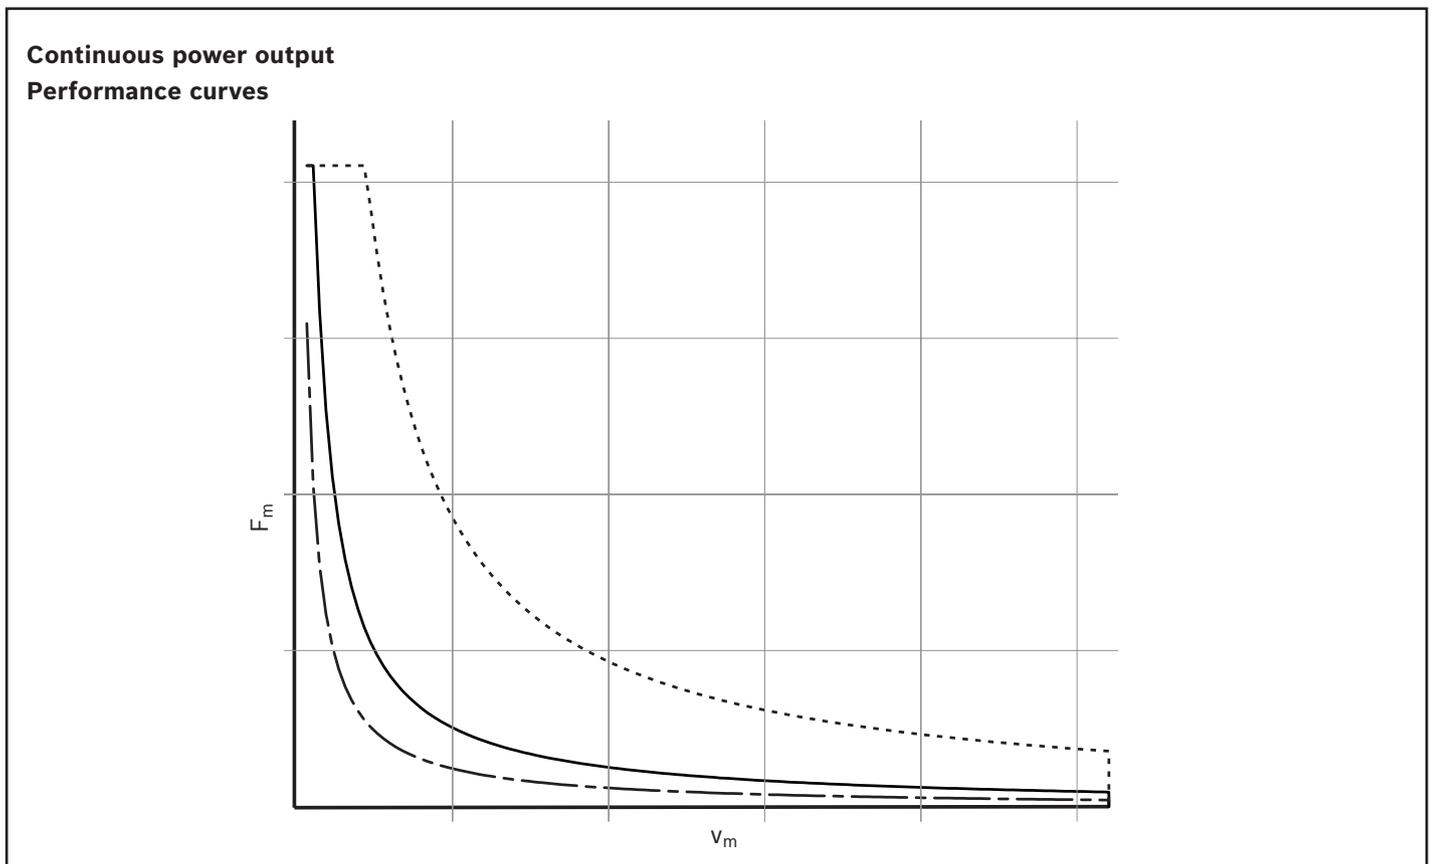

- ▶ The switches (magnetic field sensors (1)) can be used in both T-slots of the housing
- ▶ Insert the switch so that the clamping screw (2) shows outwards
- ▶ Cover profile (3) optionally available
- ▶ Further information see instructions EMC-HP R320103219

# Cooling

**The requirements of the application require an adaptation of the utility of the cylinder.  
Various possibilities are offered for this purpose.**

- ▶ The standard variant is the EMC-HP with grease lubrication. The cooling is carried out by the natural convection of the thermal energy to the environment. This inexpensive version covers the majority of applications. .
- ▶ Another variant is the EMC-HP with oil bath lubrication. This combination of a fluid inside and natural convection to the outside enables a more effective utilization of the cylinder.
- ▶ The most powerful option for demanding applications with high duty cycles or warm environments is spindle cooling. In this variant, a cooling medium is passed through the spindle. The resulting thermal energy is released into the environment through a separate cooler. For further details and support, please contact your local Bosch Rexroth sales office or your authorized dealer.

**The selected option has an influence on the possible permanent power output of the cylinder.**

----- LSW; screw cooling with grease lubrication

———— LOB; Oil bath lubrication

----- LSS; Grease lubrication

## Motor-controller combination

Several motor-controller combinations are available in order to provide the most cost-effective solution for every customer application. When sizing the drive, always consider the motor-controller combination.

You can find more information on motors and controllers in the Rexroth catalogs on drive technology at [www.boschrexroth.com/mediadirectory](http://www.boschrexroth.com/mediadirectory).

### IndraDrive drive family

The converters of the IndraDrive C series generate a DC link direct voltage from the mains voltage and from it a controlled AC output voltage with variable amplitude and frequency for operation of a servo motor.

The compact construction contains additional mains connection components, making it particularly suitable for single-axis applications.

### Version

- ▶ Basic Universal or Basic Universal with Save Motion
- ▶ Multi-Ethernet for communication with a superior controller
- ▶ More interfaces or integrated controls available
- ▶ For the converter HCS01, a smart function kit for pressing and joining applications is available
- ▶ Brake resistor included
- ▶ Adapters included
- ▶ Separate mains filter included

## Operating conditions and usage

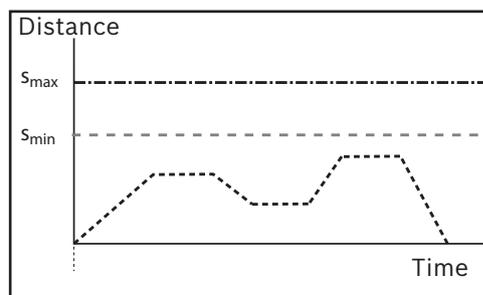

### Normal operating conditions

<b>Ambient temperature, cylinder with Rexroth servo motor</b>	0 °C ... 40 °C, above 40 °C loss of performance
<b>Ambient temperature Cylinder mechanics</b>	-10 °C ... +50 °C (up to +70 °C with low duty cycle and power)
<b>Ambient temperature Cylinder mechanics with PLSA and low-temperature grease</b>	-30 °C ... +50 °C (up to +60 °C with low duty cycle and power)
<b>Protection class</b>	IP 54; housing IP 65
<b>Duty cycle</b>	100% (depending on power required, the permissible duty cycle may be limited due to heat generation)
<b>Normal stroke</b>	The distance traveled per cycle is $\geq s_{\min}$ (see diagram)

### Stroke definition

Normal stroke

Short stroke

Short stroke: The distance traveled per cycle is  $< s_{\min}$  (see diagram).

#### Caution:

- Short stroke operation only permissible with regular lubrication strokes (larger  $s_{\min}$ )
- Perform service life expectancy calculation with reduction to the load rating
- Adapt maintenance interval

Contact Bosch Rexroth for further details.

### Notes

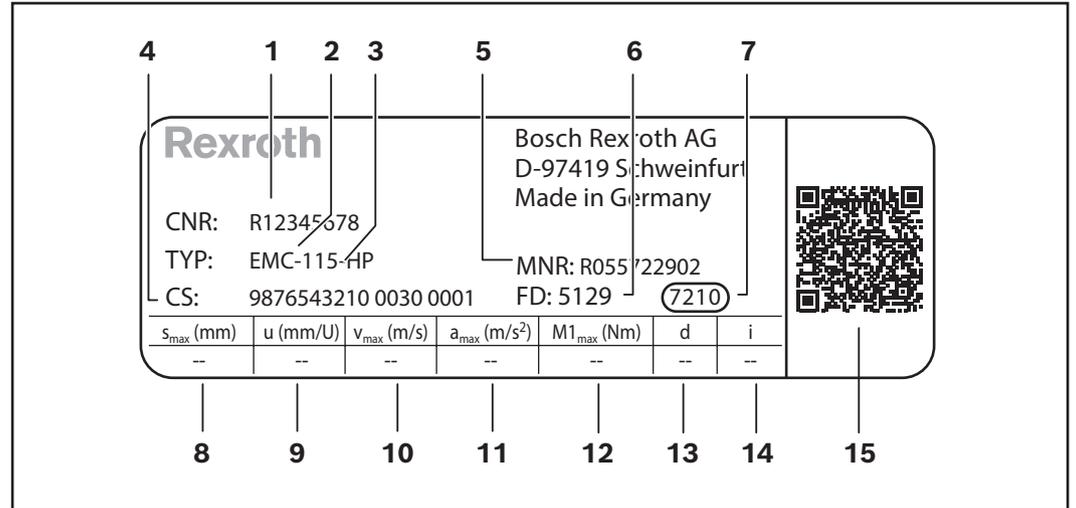

For more information about intended use and safety, see "Safety instructions for linear motion systems R320103152" and "Instructions EMC-HP R320103219".

For more information on assembly/start-up see "Instructions EMC-HP R320103219".

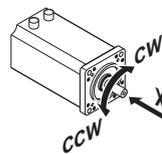

PDF files of these documents can be found on the Internet at:  
[www.boschrexroth.com/mediadirectory](http://www.boschrexroth.com/mediadirectory)

## Parameterization (start-up)

In addition to references for linear motion system production, the name plate contains technical parameters for start-up.

1	CNR	Customer's material number
2	TYP	Short product name
3	115	Size
4	CS	Customer information
5	MNR	Material number
6	FD	Date of manufacture
7	7210	Manufacturing location
8	$s_{max}$	Maximum travel range
9	$u$	Feed constant without motor attachment
10	$v_{max}$	Maximum speed
11	$a_{max}$	Maximum acceleration rate
12	$M1_{max}$	Maximum drive torque at motor journal
13	$d$	Direction of motor rotation to travel in positive (+) direction CW = clockwise CCW = counterclockwise
14	$i$	Gear ratio
15		QR code (for start-up)

### Note

The values given describe the mechanical limit values of the axle. Limit values for the included fastening elements and application-related installation cases are not taken into account here.

# Lubrication and maintenance

## Grease lubrication

The EMC-HP is designed for grease lubrication. Basic lubrication is applied in-factory before shipment.

The advantage of grease lubrication is that the planetary screw assembly can run long distances on one supply of grease.

### Recommended lubricants

Do not use lubricants with solid particles (e.g. graphite or MoS<sub>2</sub> additives). Dynalub 520 is recommended for central lubrication systems. For lubrication quantities and lubrication intervals see "Instructions EMC-HP R320103219".

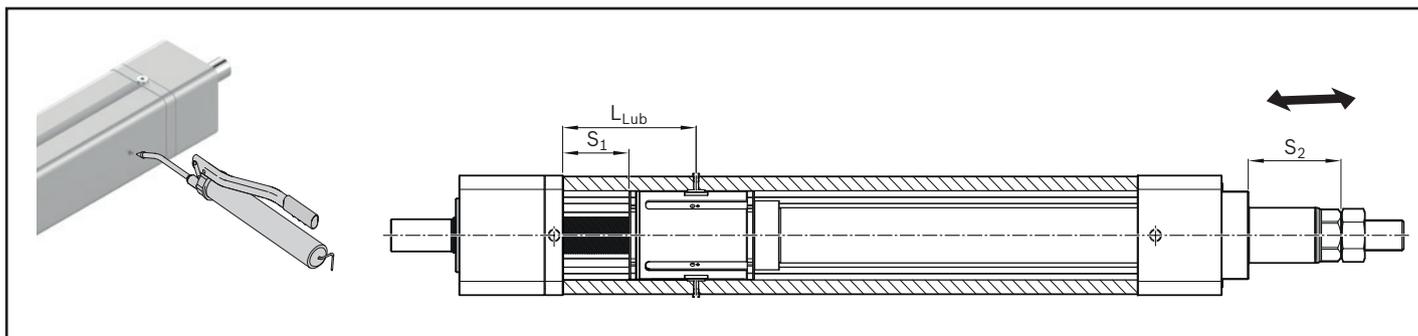

Grease		Low-temperature grease (-30 ... +60 °C)
<b>Consistency class NLGI 2 in accordance with DIN 51818</b> We recommend Dynalub 510 (Bosch Rexroth) Cartridge (400 g) R341603700 Bucket (5 kg) R341603500	<b>Consistency class NLGI 00 in accordance with DIN 51818</b> We recommend Dynalub 520 (Bosch Rexroth) Cartridge (400 g) R341604300 Bucket (5 kg) R341604200	Klüber BEM 34-132 R341603600
<b>Can also be used</b> Elkalub GLS 135 / N2 (Chemie-Technik) Tribol GR 100-2 PD (Castrol)	<b>Can also be used</b> Elkalub GLS 135 / N00 (Chemie-Technik) Tribol GR 100-00 PD (Castrol)	

### Lubrication position

a) Move the piston rod to stroke position  $S_2$  (reference position) see figure

b) Without limit switch, extend from the rear end position by  $S_1 + 5$  mm.

For more information, see "Instructions EMC-HP, R320103219".

EMC-HP	Dimensions (mm)			
	$L_{Lub}$	$S_1$	$S_2$	
115	143.5	75	120	
130	151.0	75	124	
160	164.5	75	127	

## Oil bath lubrication

For maintenance-free operation a oil bath lubrication can optionally selected.

The prerequisites for this are:

- ▶ normal operating conditions (see chapter operating conditions)
- ▶  $F_m/C \leq 0,05$
- ▶  $V_m \geq 0,05$  m/s
- ▶ Trafel life L up to 15 000 km
- ▶  $T = -20$  °C up to 50 °C

An oil with a viscosity of 220 is used as standard (e.g. Shell Tonna 220)

# Documentation

**Standard report  
Option 01**

The standard report serves to confirm that the checks listed in the report have been carried out and that the measured values lie within the permissible tolerances.

Checks listed in the standard report:

- Functional checks of mechanical components
- Functional checks of electrical components
- Design as per order confirmation

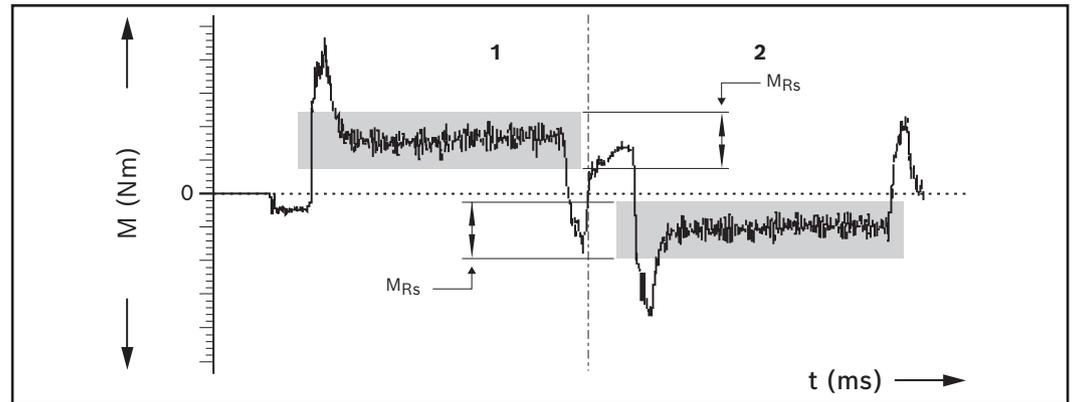

**Measurement of frictional torque of complete system**

**Option 02**

All items as per the standard report.

The friction torque  $M$  is measured over the entire travel range.

**Example diagram**

- 1) Advance
- 2) Return

$M_{Rs}$  = Frictional torque (N)  
 $t$  = Travel time (ms)

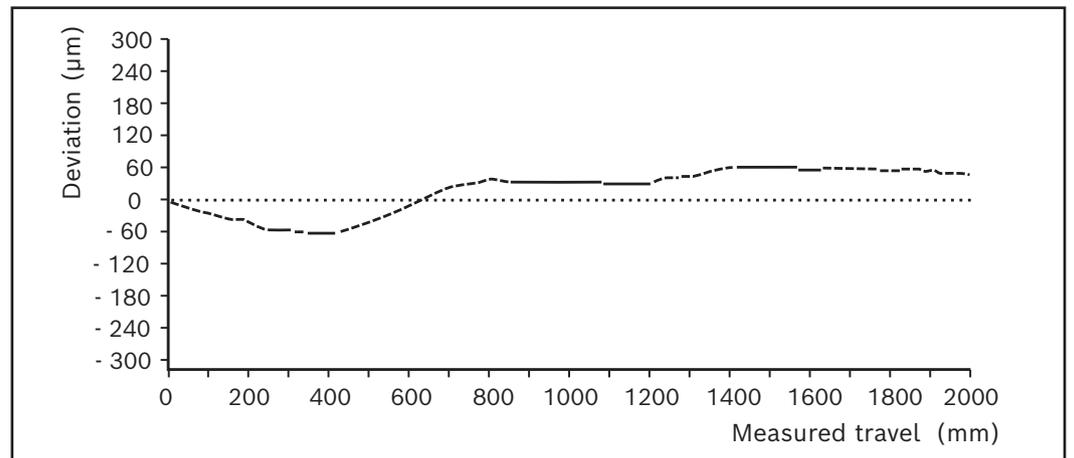

**Lead deviation of screw drive**

**Option 03**

All items as per the standard report.

In addition to the graphical illustration (see figure), a measurement report is included in tabular form.

## Glossary (definitions)

### **Dynamic load capacity C:**

Constant that is used to calculate the service life of a screw drive. The value for the dynamic load capacity C represents the load under which 90% of a sufficiently large number of identical screw drives can achieve a service life of one million revolutions.

### **Limit switch:**

Limit switches are used to monitor the end position of moving parts. They emit a signal when the component reaches a certain position, usually the beginning or end of a stroke. The signal can be electrical, pneumatic or mechanical. Typical forms of limit switches with electrical signals are roller lever switches or non-contacting switches such as light barriers and proximity switches.

### **Service life:**

The nominal life is expressed by the number of revolutions (or number of operating hours at constant rotary speed) that will be attained or exceeded by 90% of a sufficiently large number of identical screw drives before the first signs of material fatigue become evident.

### **Maximum force $F_{\max}$ :**

Maximum permissible mechanical load in axial direction.

### **Positioning accuracy:**

The positioning accuracy is the maximum deviation between the actual position and the target position, as defined in VDI/DGQ 3441.

### **Reference switch:**

Reference switches are used to detect the position of a moved component, e.g. screw drive nut in the cylinder. The switch emits a signal when the component reaches a defined position (reference mark). Reference switches are required for incremental measuring systems or motors with incremental encoders during start-up and after any interruption to the power supply.

### **Lead:**

Relating to screws or threaded shafts, the lead is the linear distance traveled per revolution of the screw or shaft. In the case of a single thread (single-start screws), this is the distance between two thread crests or two grooves (running tracks).

### **Gear ratio:**

This relates to the transmission and conversion of movements, linear and rotary speeds, forces and torques in a geared mechanism. The gear ratio (also known as reduction ratio) is the ratio between the drive variable and the output variable, e.g. the ratio of input speed to output speed.

### **Repeatability:**

The repeatability indicates how precisely a linear system positions itself when approaching a position repeatedly from the same direction (unidirectional motion). It is stated as the deviation between the actual position and the target position.

# Abbreviations

Abbreviation/ Index	Name	Unit
<b>a</b>	Acceleration	(m/s <sup>2</sup> )
<b>a<sub>max</sub></b>	Maximum acceleration rate	(m/s <sup>2</sup> )
<b>BASA</b>	Ball screw assembly	(–)
<b>B<sub>t</sub></b>	Belt type	(–)
<b>c<sub>spe</sub></b>	Specific spring rate	(N)
<b>C<sub>gw</sub></b>	Dynamic load capacity, guideway	(N)
<b>C<sub>bs</sub></b>	Dynamic load capacity for ball screw assembly	(N)
<b>C<sub>fb</sub></b>	Dynamic load capacity for fixed bearing	(N)
<b>d<sub>0</sub></b>	Nominal diameter of ball screw assembly	(mm)
<b>d<sub>3</sub></b>	Belt pulley diameter	(mm)
<b>f<sub>w</sub></b>	Load factor	(–)
<b>F<sub>n</sub></b>	Axial load of the ball screw assembly	(N)
<b>F<sub>eff</sub></b>	Effective equivalent axial load	(N)
<b>F<sub>bp</sub></b>	Max. belt drive transmission force	(N)
<b>F<sub>comb</sub></b>	Combined equivalent bearing load	(N)
<b>F<sub>mbs</sub></b>	Equivalent dynamic load on bearing of the ball screw assembly	(N)
<b>F<sub>mgw</sub></b>	Equivalent dynamic load on bearing of the guideway	(N)
<b>F<sub>n</sub></b>	Axial load of the ball screw assembly	(N)
<b>F<sub>t zul</sub></b>	Belt elasticity limit	(N)
<b>F<sub>y</sub></b>	Load due to a resulting force in the y-direction	(N)
<b>F<sub>y max</sub></b>	Maximum dynamic load in y-direction	(N)
<b>F<sub>z</sub></b>	Load due to a resulting force in the z-direction	(N)
<b>F<sub>z max</sub></b>	Maximum dynamic load in z-direction	(N)
<b>g</b>	Gravitational acceleration (= 9.81)	(m/s <sup>2</sup> )
<b>i</b>	Gear ratio	(–)
<b>I<sub>y</sub></b>	Planar moment of inertia about the y-axis	(cm <sup>4</sup> )
<b>I<sub>z</sub></b>	Planar moment of inertia about the z-axis	(cm <sup>4</sup> )
<b>J<sub>br</sub></b>	Mass moment of inertia of the motor brake	(kgm <sup>2</sup> )
<b>J<sub>c</sub></b>	Mass moment of inertia of coupling	(kgm <sup>2</sup> )
<b>J<sub>dc</sub></b>	Mass moment of inertia of the drive train	(kgm <sup>2</sup> )
<b>J<sub>ex</sub></b>	Mass moment of inertia of the mechanical system	(kgm <sup>2</sup> )
<b>J<sub>ge</sub></b>	Mass moment of inertia of gear about the motor journal	(kgm <sup>2</sup> )
<b>J<sub>m</sub></b>	Mass moment of inertia of motor	(kgm <sup>2</sup> )
<b>J<sub>s</sub></b>	Mass moment of inertia of linear motion system	(kgm <sup>2</sup> )
<b>J<sub>sd</sub></b>	Mass moment of inertia of belt side drive about the motor journal	(kgm <sup>2</sup> )
<b>J<sub>t</sub></b>	Translative mass moment of inertia of external load based on the linear motion system screw journal	(kgm <sup>2</sup> )
<b>k<sub>g fix</sub></b>	Constant for fixed portion of mass	(kg)
<b>k<sub>g var</sub></b>	Constant for variable-length portion of mass	(kg/mm)

Abbreviation/ Index	Name	Unit
<b>k<sub>J fix</sub></b>	Constant for fixed portion of mass moment of inertia	(kgmm <sup>2</sup> )
<b>k<sub>J m</sub></b>	Constant for mass-specific portion of mass moment of inertia	(mm <sup>2</sup> )
<b>k<sub>J var</sub></b>	Constant for variable-length portion of mass moment of inertia	(kgmm)
<b>L</b>	Length of the linear motion system	(mm)
<b>L<sub>ad</sub></b>	Additional length	(mm)
<b>L<sub>c</sub></b>	Length nut/length nut and housing	(mm)
<b>L<sub>ca</sub></b>	Carriage length	(mm)
<b>L<sub>bs</sub></b>	Nominal service life (Ball screw assembly, fixed bearing)	(min <sup>-1</sup> )
<b>L<sub>hbs</sub></b>	Nominal service life (Ball screw assembly, fixed bearing)	(h)
<b>L<sub>gw</sub></b>	Nominal life of the guideway	(m)
<b>L<sub>hgw</sub></b>	Nominal life of the guideway	(h)
<b>L<sub>w</sub></b>	Centerline-to-centerline distance between carriages	(mm)
<b>m<sub>br</sub></b>	Holding brake mass	(kg)
<b>m<sub>ca</sub></b>	Moved mass of system of carriage	(kg)
<b>m<sub>ex</sub></b>	Moved external load	(kg)
<b>m<sub>fc</sub></b>	Mass of flange and coupling	(kg)
<b>m<sub>m</sub></b>	Mass of the motor	(kg)
<b>m<sub>s</sub></b>	Mass of the linear system (without attachments)	(kg)
<b>m<sub>sd</sub></b>	Mass of the timing belt side drive	(kg)
<b>M<sub>0</sub></b>	Continuous motor torque	(Nm)
<b>M<sub>cN</sub></b>	Rated torque of coupling	(Nm)
<b>M<sub>g</sub></b>	Weight moment at motor journal	(Nm)
<b>M<sub>ge</sub></b>	Maximum permissible acceleration torque of the gear (on the output drive)	(Nm)
<b>M<sub>L</sub></b>	Dynamic longitudinal moment load capacity	(Nm)
<b>M<sub>m</sub></b>	Equivalent dynamic torque	(Nm)
<b>M<sub>max</sub></b>	Max. possible motor torque	(Nm)
<b>M<sub>mech</sub></b>	Maximum permissible drive torque for mechanical system	(Nm)
<b>M<sub>p</sub></b>	Maximum permissible drive torque (at drive journal)	(Nm)
<b>M<sub>R</sub></b>	Frictional torque at motor journal	(Nm)
<b>M<sub>Rge</sub></b>	Friction torque of gear at motor journal	(Nm)
<b>M<sub>Rs</sub></b>	Friction torque of system	(Nm)
<b>M<sub>Rsd</sub></b>	Friction torque of belt side drive at motor journal	(Nm)
<b>M<sub>sd</sub></b>	Maximum permissible drive torque of the belt side drive	(Nm)
<b>M<sub>stat</sub></b>	Static load moment	(Nm)
<b>M<sub>t</sub></b>	Dynamic torsional moment load capacity	(Nm)
<b>M<sub>x</sub></b>	Dynamic torsional moment around the X-axis	(Nm)
<b>M<sub>x max</sub></b>	Maximum permissible torsional moment around the x-axis	(Nm)

<b>Abbreviation/ Index</b>	<b>Name</b>	<b>Unit</b>
<b>M<sub>y</sub></b>	Dynamic torsional moment around the y-axis	(Nm)
<b>M<sub>y max</sub></b>	Maximum permissible torsional moment around the y-axis	(Nm)
<b>M<sub>z</sub></b>	Dynamic torsional moment around the z-axis	(Nm)
<b>M<sub>z max</sub></b>	Maximum permissible torsional moment around the z-axis	(Nm)
<b>n</b>	Rotary speed of the ball screw assembly	(min <sup>-1</sup> )
<b>n<sub>1</sub>, n<sub>2</sub>, ... n<sub>n</sub></b>	Rotary speed in acceleration and Bremsphasen	(min <sup>-1</sup> )
<b>n<sub>A1 ... n</sub></b>	Starting speed in phase 1 ... n	(min <sup>-1</sup> )
<b>n<sub>E1 ... n</sub></b>	Ending speed in Phase 1–n	(min <sup>-1</sup> )
<b>n<sub>ge</sub></b>	Maximum permissible rotary speed of the gear	(min <sup>-1</sup> )
<b>n<sub>m</sub></b>	Average rotary speed of the ball screw assembly	(min <sup>-1</sup> )
<b>n<sub>mech</sub></b>	Maximum permissible rotary speed for mechanical system	(min <sup>-1</sup> )
<b>n<sub>max</sub></b>	Max. motor speed	(min <sup>-1</sup> )
<b>n<sub>p</sub></b>	Maximum permissible rotary speed of the linear motion system	(min <sup>-1</sup> )
<b>P</b>	Screw lead/ball screw assembly	(mm)
<b>P<sub>app</sub></b>	Effective power in application	(W)
<b>Keyway</b>	Keyway	(–)
<b>qt<sub>1..n</sub></b>	Time step of the phases	(%)
<b>s<sub>a</sub></b>	Acceleration travel	(mm)
<b>s<sub>e</sub></b>	Excess travel	(mm)
<b>s<sub>eff</sub></b>	Effective stroke	(mm)
<b>s<sub>min</sub></b>	Min. travel range	(mm)
<b>s<sub>max</sub></b>	Maximum travel	(mm)
<b>SPU</b>	Screw support	(–)
<b>TT</b>	Carriage	(–)
<b>t<sub>a</sub></b>	Acceleration/braking time	(s)
<b>t<sub>1</sub>, t<sub>2</sub>, ... t<sub>n</sub></b>	Time for phases 1 ... n	(s)
<b>t<sub>ges</sub></b>	Sum of time steps	(s)
<b>u</b>	Feed constant	(mm/U)
<b>v<sub>1</sub>, v<sub>2</sub>, ... v<sub>n</sub></b>	Speed in phase 1 ... n	(m/s)
<b>v<sub>max</sub></b>	Maximum permissible speed	(m/s)
<b>v<sub>mech</sub></b>	Maximum permissible speed of mechanical system	(m/s)
<b>v<sub>mgw</sub></b>	Average linear speed of the guideway	(m/s)
<b>V</b>	Ratio of mass moments of inertia of drive chain and motor	(–)
<b>z<sub>1</sub></b>	Application point of the effective force	(mm)
<b>π</b>	Pi	(–)
